*Recent Advances in Physical Chemistry ... Second Edition, Etc* Samuel Glasstone,1933      **New Fibers, Second Edition** Tatsuya Hongu,1997-05-01 Second edition 1997 We have taken this opportunity to revise the original and to add new information about developments since 1990 Since 1990 there have been considerable changes in the nature of the fibers being produced the production methods and in consumers values and expectations Since 1990 the march of high tech fibers has continued with an ever increasing sub division to meet the specialised applications as in high performance high function and high sense fibers New research and development has produced fibers with high tenacity and modulus to give the super fibers now used as industrial materials n ew ultrafine fibers can emulate the functionality and ambience of biological fibers The synthetic celluloseics have made a particular resurgence since 1990 and the various solvent spun fibers are now making a great impact on the market They now offer the processability of synthetics along with the in built advantages of natural cotton We hope that the approach of the 1st edition is now extended to illustrate the dynamism of this frontier industry pointing the way forward into the next century If you think fiber technology is a mature technology this new book may change your mind It examines many new high performance application specific synthetic fibers recently introduced Included are details of chemistry research and development properties and performance processing and specific industrial consumer and medical applications This extensive survey of new fibers and fiber technology serves the information needs of all those involved in the development and commercialization of new and improved fibers It also provides fascinating reading for all those interested in this subject      **Recent Advances In Spray Combustion** Kenneth K. Kuo,1996      **Lectures on Some Recent Advances in Physical Science, with a Special Lecture on Force** Peter Guthrie Tait,1885      **Recent Advances in Thermo and Fluid Dynamics** Mofid Gorji-Bandpy,2015-12-21 Thermodynamics is a branch of physics concerned with heat and temperature and their relation to energy and work It defines macroscopic variables such as internal energy entropy and pressure that partly describe a body of matter or radiation It states that the behavior of these variables is subject to general constraints that are common to all materials not to the peculiar properties of particular materials These general constraints are expressed in the three laws of thermodynamics which had a deep influence on the development of physics and chemistry The book aims to present novel ideas that are crossing traditional disciplinary boundaries and introducing a wide spectrum of viewpoints and approaches in applied thermodynamics of the third millennium The book will be of interest to those working in the fields of propulsion systems power generation systems chemical industry quantum systems refrigeration fluid flow combustion and other phenomena      **Catalogue** Pharmaceutical Society of Great Britain.
