Recent Developments in Variable Structure Systems, Economics and Biology R.R. Mohler,A. Ruberti,2012-12-06

The seminar for which the proceedings are published here evolved from a cooperative research program on bilinear systems and applications to immunology at the Oregon State University and at the University of Rome The topics include more general forms of variable structure systems which may be divided into categories of mathematical system theory economic applications and biological applications Throughout the seminar there was emphasis on the integration of theory and application In most cases theoretical derivations are motivated by their need to solve practical problems In reading the proceedings it becomes apparent that bilinear systems quadratic systems and more general variable structure or adaptive systems become natural models in many cases and excellent approximations in others It is seen that linear systems have very limited use particularly in economics and biology Variable structure systems are analyzed in terms of structure voltaerra kernels system modelling parameter identification controllability and Lie algebra to mention a few Certainly it is not possible to present a complete treatment of these numerous topics but at the Same time the unifying power of the systems approach and variable structure systems is shown

B. Das, Christy P. Gomez, Benu. G. Mohapatra, 2022-04-25 This book includes selected papers from the International Conference on Recent Developments in Sustainable Infrastructure ICRDSI 2020 and consists of themes pertaining to structural engineering and construction technology and management Fiscal Policy, Public Debt and the Term Structure of Interest Rates Roland Demmel, 2012-12-06 The introduction of the thesis consists of four parts first we motivate our chosen macroeconomic setting by looking at some real world phenomena For a better understanding of these phenomena we argue that the mutual dynamic interactions between fIScal policy and financial markets need to be closely examined in a macroeconomic framework Second we review different strands of the economic literature in order to show that most of the literature has so far exclusively concentrated either on fmanical market dynamics or on fIScal policy issues We conclude that a more integrated model setting is called for in order to explain the dynamic interactions observed in reality Third we discuss at length the economic assumptions underlying our model This avoids multiple repetition later on Finally we outline the structure of the thesis and the objectives we pursue in the different chapters 1 1 Motivation Fiscal policy and

financial market reactions are increasingly receiving world wide attention The most recent examples are the Maastricht criteria about fIScal control the South East Asia financial crisis and the resulting IMF policy stance the high level of public debt in developed and developing countries and the effect on interest rates and economic growth In contrast to the still underdeveloped theoretical literature on these dynamic links finding empirical evidence that supports the existence of these links is not a very hard task

Historical Developments and Theoretical Approaches in Sociology - Volume I Charles Crothers ,2010-11-30 Historical Developments and Theoretical Approaches in Sociology in two volumes is a component of Encyclopedia of Social Sciences and Humanities in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty Encyclopedias Sociology is one of several social science disciplines and smaller bodies of knowledge which seeks to understand the patterns in social life There is a broad congruence between the objective configurations of social life and the components of the disciplines studying them the body of sociological knowledge is socially constructed and the pathways to its gaining of knowledge influenced by a variety of factors Moreover since social life is ever changing sociology often has to scramble to catch up with the changing social world This work is built up around four broad topics the first providing important shared contextual material and then followed by three broad levels of social analysis with each of these four parts containing a number of chapters with more specific and in depth information The theme essay provides a general introduction and overview of the theme as a whole In total the work holds 40 contributions written by a selection of many international renowned specialists from 12 countries It was important to obtain a wide range of viewpoints giving the ways in which social issues arise quite differently in a range of countries These two volumes are aimed at the following five major target audiences University and College Students Educators Professional Practitioners Research Personnel and Policy Analysts Managers and Decision Makers NGOs and GOs

Structure-Activity and Selectivity

Relationships in Heterogeneous Catalysis R.K. Grasselli,A.W. Sleight,1991-07-09 Structure plays an important role in heterogeneous catalysis It provides a framework for the arrangement and strategic placement of key catalytic elements hosting them in a prescribed manner so that their respective electronic properties can exhibit their desired catalytic functions and mutual interactions Under reaction conditions these framework structures and their catalytic guests undergo dynamic processes becoming active participants of the overall catalytic process They are not mere static geometric forms The dynamics of catalytic structures are particularly vivid in selective oxidation catalysis where the lattice of a given catalytic solid partakes as a whole not only its surface in the redox processes of the reaction The catalyst becomes actually a participating reagent By proper choice of key catalytic elements and their host structures preferred catalytic pathways can be selected over less desired ones However not only in selective redox catalysis does structure play an important role its importance is also well documented among others in shape selective zeolite catalysis enantioselective hydrogenation and hydrodesulfurization The contributions presented in this book address the dynamic character of the solid state under catalytic reaction conditions By relating structure to activity and selectivity in heterogeneous catalysis our understanding of such correlations has been significantly enhanced through the use of sophisticated spectroscopic means surface science and modeling Frontiers on Recent Developments in Plant Science Aakash Goyal,Priti Maheshwari,2012 Frontiers on Recent

,2007-10-13 Most of the untreated surfaces of polymers used in industry are not hydrophilic but hydrophobic It is therefore difficult to bond these nonpolar polymer surfaces directly to other substances like adhesives printing inks and paints because they generally consist of polar compounds On the other hand polymer surfaces generally adsorb proteins when brought into direct contact with a biological system resulting in cell attachment or platelet aggregation The protein adsorption and attachment of biological components trigger a subsequent series of mostly adverse biological reactions toward the polymeric materials Therefore the technologies for surface modification of polymers or regulation of the polymer surface interaction with other substances have been of prime importance in polymer applications from the advent of polymer industries Some of the technologies have been directed to introduction of new functionalities onto polymer surfaces The new functionalities introduced include improved surface hydrophilicity hydrophobicity biocompatibility conductivity antifogging antifouling grazing surface hardness surface roughness adhesion lubrication and antistatic property Theoretically there is a large difference in properties between the surface and the bulk of a material and only the outermost surface is enough to be taken into consideration when the surface properties are concerned However this is not the case for polymer surfaces as the physical structure of the outermost polymer surface is generally not fixed but continuously changing with time due to the microscopic Brownian motion of polymer segments *Microencapsulation/Microgels/Iniferters* ,1998-05-20 **Recent**
