Chazov, 2013-06-29 This volume of *Advances in Myocardiology* is derived from a part of the proceedings of the 10th Congress of the International Society for Heart Research which was held in Moscow on September 23-29 1980 This book contains selected papers which have been arranged in two sections Cardiac Hypertrophy Adaptation and Pathophysiology and Cardiac Hypoxia Ischemia and Infarction The first section on the pathophysiology of heart hypertrophy and failure contains 24 chapters that focus on the derangement of biochemical physiological and immunological processes during the development of heart disease due to a wide variety of pathogenic factors Some of the recent developments in understanding the myocardial synthetic machinery in heart hypertrophy are also described in these papers and we believe that the contents of this section will stimulate further research in the area of heart disease The second section which mainly deals with myocardial ischemia contains 35 chapters providing the necessary background for the diagnosis of ischemic heart disease and some possible therapeutic approaches It hardly needs to be emphasized that ischemic heart disease is a major cause of death in highly industrialized countries but unfortunately the exact mechanism by which ischemic insult leads to the development of heart cell damage is far from understood We are hopeful that the articles in this section will provide valuable information in this field and thus will help in improving the treatment of ischemic heart disease      **Physiology and Pathophysiology of the Heart** Nicholas Sperelakis, 2012-12-06 The first edition of this book was quite successful As in the first edition the book is divided into two major sections cardiac muscle and coronary circulation Several complimentary book reviews appeared soon after publication The book is multidisciplinary and includes after the first edition was published and written and membrane biophysics electrophysiology physiological words of praise and appreciation were given both to the pathophysiology pharmacology biochemistry to the publisher and to me by quite a few individuals and ultrastructure Thus the book attempts to integrate all relevant aspects of the factors influencing the function of the heart as a vital organ under normal and various abnormal conditions The book taking over a year to complete All contributors also attempts to set the foundation for an understanding of the action and mechanism of action of a number of classes of cardioactive drugs

**Publication** ,1980      Myocarditis Cardiomyopathy Hanjoerg Just,H.P. Schuster,2012-12-06 Primary myocardial disease nowadays referred to as congestive or more recently dilating cardiomyopathy comprises disorders of varied etiology Most oftenly the pathogenetic mechanism or causative agent remains unknown The significance of inflammatory processes i e myocarditis in a wider sense as the etiologic factor has been debated for many years In a few instances especially in children and newborns viral infections can be incriminated In adults this etiology can be ascertained only in rare instances And it has remained entirely uncertain if or under which circumstances and how often virus myocarditis can lead to a chronic disorder of the heart namely dilated cardiomyopathy Although it would seem conceivable that an immunological response to an infectious agent might induce parenchymal damage with subsequent loss of cellular function and structural integrity of permanent nature i e dilatation functional deterioration and dysrhythmias numerous attempts to establish such a pathogenetic mechanism have not yet furnished convincing results Therefore the reader will direct his attention specifically to the respective contribution in this volume Morphologic studies have yielded a host of new and intriguing findings in cardiomyopathy but have likewise failed to settle the basic question as to which etiology can be held responsible in a given case especially if an inflammatory process can be incriminated Specific processes such as sarcoidosis of the heart undoubtedly furnish examples of chronic inflammation as a cause of dilating cardiomyopathy This disorder however as a specific inflammatory myocardial affection i e myocarditis is encountered only infrequently      Selected Technical Publications ,1978      *Heart Muscle: Ultrastructural Studies* Visvan Navaratnam,1987-11-26      **Cellular and Molecular Toxicology and In Vitro Toxicology** Daniel Acosta,2017-07-28 This work concentrates on cellular and molecular toxicity of selected well known drugs or chemicals on the cardiovascular system The primary objective is to provide a better understanding of the mechanisms by which xenobiotics are toxic to mammalian tissues and cells The use of in vitro cellular and tissue systems provides attractive experimental models to assess toxic manifestations of xenobiotics This work addresses the most recent findings on the cellular and molecular mechanisms of toxicity of several important cardiotoxic agents doxorubicin ethanol cocaine and the catecholamines It presents an overview of vascular toxins and their biochemical effects Included is a summary of in vitro cardiovascular techniques for assessing toxicity of xenobiotics This publication is important for those in toxicology tissue culture pharmacology in vitro toxicology developmental biology and related areas      The Emergence of Drugs which Block Calcium Entry Ronald D. Smith,Peter S. Wolf,John R. Regan,Stanley R. Jolly,2013-03-07 Calcium Entry Blockers CEBs are a new class of drugs which have been pushing back the frontiers of science and medicine for almost two decades This report reviews some of the wealth of chemical biological and clinical data describing the discovery and development of these compounds The scientific importance therapeutic benefit and marketing potential of these compounds have caused an explosion of scientific literature describing their effects in many preclinical and clinical settings The definitional characteristics of these compounds suggest a certain predictability of their biological profile but

their therapeutic usefulness varies widely dependent upon their physical properties net hemodynamic effects duration of action and incidence of side effects CEBs appear uniquely suited to the treatment of the underlying complexity of cardiovascular disease The CEBs of the future may live up to the expectations of pathophysiologically based therapeutics and allow the heart and blood vessels to outlive the cells which they support The development of CEBs is an evolving story of epic proportions and represents the cooperative efforts of individuals in all areas of science      **Advances in Myocardiology** ,1983      *Catecholamines and Stress* Earl Usdin,Richard Kvetnanský,Irwin J. Kopin,2014-05-08 Catecholamines and Stress covers the proceedings of the International Symposium on Catecholamines and Stress held in Bratislava Czechoslovakia on July 27 30 1975 This book mainly focuses on catecholamines and stress presenting papers specifically discussing the brain neurohumoral regulation in stress and changes induced by stress A set of papers tackle the catecholamine synthesizing and degrading enzymes under stress Other papers are devoted to topics on catecholamine synthesis and degradation under stress release level and excretion of catecholamines in stress and catecholamines and stress in man This text will be invaluable to students and experts in physiology biology and related fields      *New Aspects of Hypertrophic Cardiomyopathy* M. Kaltenbach,R. Hopf,B. Kunkel,2012-12-06      **Quantification of Circulating Proteins** Wim Th. Hermens,George M. Willems,Marja P. Visser,2012-12-06 Less than 50 years ago it was discovered that steady state protein concentrations in plasma are the net result of continuous elimination and synthesis of protein molecules The first quantitative studies on the turnover and distribution of plasma proteins were made around 1950 after the introduction of radio labeled protein preparations Around 1970 another development in quantitative interpretation of circulating proteins was initiated in clinical enzymology Estimation of cumulative release into plasma of cellular enzymes can be helpful in a variety of diseases to assess the extent of tissue damage and to evaluate therapy Enzymes can be considered as biological tracers i.e. minute quantities of protein can be accurately determined by their specific catalytic activities However radioactive tracers permit direct estimates of turnover and distribution by measurement of excreted radioactivity possibilities that are not available for enzymes Consequently only a few techniques used in tracer studies with radiolabeled proteins can be applied to circulating tissue enzymes and this may explain the lack of communication between the fields of plasma protein metabolism and quantitative clinical enzymology In the present study a summary is given of the basic methods used in both fields with emphasis on the equivalence of various models and formalisms used by different authors It is shown that major limitations in the study of circulating tissue enzymes can be overcome if two different but simultaneously released enzymes can be measured The resulting method will also be applied to plasma protein metabolism      Journal of Molecular and Cellular Cardiology ,1985      Clinical Neurocardiology Louis R.
