**Autobiographical Memory** Charles P. Thompson,Douglas J. Herrmann,Darryl Bruce,J. Don Read,David G. Payne,2014-10-10 The organization of the first Society for Applied Research in Memory and Cognition

SARMAC conference centered around two specifically identifiable research topics autobiographical memory and eyewitness memory. These two areas long time staples on the menu of investigators of memory in more natural settings differ on a variety of dimensions perhaps most notably in their specific goals for scientific inquiry and application. For many questions about memory and cognition that are of interest to scientific psychology there have been historical as well as rather arbitrary reasons for their assignment to the autobiographical or eyewitness memory fields. Perhaps as a result of differing historical orientations the first volume's seven autobiographical memory chapters focus upon the qualities or types of recall from research participants whereas the seven chapters in the eyewitness memory volume generally focus upon the quantity a concern for completeness and accuracy of recall. This interest in the ultimate end product and its application within the legal process in general encourages eyewitness memory investigators to modify their testing procedures continually in an attempt to gain even more information from participants about an event. Indeed several of the eyewitness memory chapters reflect such attempts. Beyond the specific contributions of each chapter to the literature on autobiographical and eyewitness memory the editors hope that the reader will come away with some general observations the autobiographical and eyewitness memory fields are thriving these two fields are likely to remain center stage in the further investigation of memory in natural contexts although the autobiographical and eyewitness memory chapters have been segregated in these two volumes the separation is often more arbitrary than real and connections between the two areas around the two research traditions are entirely mindful of fundamental laboratory methods research and theory sometimes drawing their research inspirations from that quarter and the two fields though driven largely by everyday memory concerns can contribute to a more basic understanding of memory at both an empirical and a theoretical level **Theoretical**

**Perspectives on Autobiographical Memory** M.A. Conway, David C. Rubin, Hans Spinnler, Willem A. Wagenaar, 2013-04-17  
The meeting Theoretical Perspectives on Autobiographical Memory was held at the Grange Hotel Grange over Sands in the Lake District region of North Western England July 1991. The workshop was financed by a generous grant from the NATO Scientific Affairs Division under the Advanced Research Workshop programme and without this funding the meeting would not have been possible the organisers and delegates gratefully acknowledge the support of the NATO Advanced Research Workshops programme. Thirty five scientists from five different NATO countries attended the workshop and twenty seven delegates presented papers. The two aims of the workshop were to bring together in one forum a number of comparatively separate approaches to autobiographical memory and to promote theory in the area generally. These aims were fulfilled in the presentations and discussions particularly the final discussion session in which delegates focussed on the central issues of the nature structure and functions of autobiographical memory and how these emerge in different research areas. The present volume contains the papers arising from the workshop. We thank Mrs Sheila Whalley for secretarial help and Fiona Hirst and Stephen Anderson for practical assistance in coordinating registration for the workshop *The Memory Program*
