Mems Packaging Yung-cheng Lee, Yu-ting Cheng, Ramesh Ramadoss, 2018-01-03 MEMS sensors and actuators are enabling components for smartphones AR VR and wearable electronics MEMS packaging is recognized as one of the most critical activities to design and manufacture reliable MEMS A unique challenge to MEMS packaging is how to protect moving MEMS devices during manufacturing and operation With the introduction of wafer level capping and encapsulation processes this barrier is removed successfully In addition MEMS devices should be integrated with their electronic chips with the smallest footprint possible As a result 3D packaging is applied to connect the devices vertically for the most effective integration Such 3D packaging also paves the way for further heterogeneous integration of MEMS devices electronics and other functional devices This book consists of chapters written by leaders developing products in a MEMS industrial setting and faculty members conducting research in an academic setting After an introduction chapter the

practical issues are covered through silicon vias TSVs vertical interconnects wafer level packaging motion sensor to CMOS bonding and use of printed circuit board technology to fabricate MEMS These chapters are written by leaders developing MEMS products Then fundamental issues are discussed topics including encapsulation of MEMS heterogenous integration microfluidics solder bonding localized sealing microsprings and reliability
