High Pressure Chemistry, Biochemistry and Materials Science R. Winter, Jiri Jonas, 2012-12-06 This monograph which is the outcome of the ASI on High Pressure Chemistry Biochemistry and Materials Science illustrates new developments in the field of high pressure science In fact for chemists biochemists and materials scientists pressure as an experimental variable represents a tool which provides unique information about systems of materials studied It is interesting to note how the growth of the high pressure field is also reflected in the content of the recent ASI's dealing with this field The ASI High Pressure Chemistry held in 1977 was followed by the ASI High Pressure Chemistry and Biochemistry held in 1986 and the coverage of the present ASI also includes applications to materials science In view of the teaching character of the ASI it is natural that main contributions to this volume present overviews of the different subfields or applications of high pressure research In contrast contributed papers offer more specialized aspects of various high pressure studies The various contributions to this volume make clear the impressive range of fundamental and applied problems that can be studied by high pressure techniques and also point towards a major growth of high pressure science and technology in the near future This ASI focused mainly on advances

achieved in the six years since the previous ASI devoted to the high pressure field The organization of this volume is as follows

**Domino and Intramolecular Rearrangement Reactions as Advanced Synthetic Methods in Glycoscience** Zbigniew J. Witczak, Roman Bielski, 2016-01-14 The book consists of a brief introduction a foreward provided by professor Danishefsky of Columbia University and about 14 16 chapters each written by one or two eminent scholars authors describing their recent research in the area of either domino reactions or intramolecular rearrangements in carbohydrate chemistry Three or four chapters will be reviews The domino cascade tandem reactions are always intramolecular They are usually very fast clean and offer highly complex structures in a one pot process Intramolecular rearrangements offer very similar advantages and often lead to highly complex products as well Although many recently isolated carbohydrates fulfill various sophisticated functions their structures are often very complex The editors cover the broadest scope of novel methodologies possible All the synthetic and application aspects of domino cascade reactions are explored in this book A second theme that will be covered is intramolecular rearrangement which is also fast stereoselective and often constitutes one or more steps of domino cascade process Selected examples of intramolecular rearrangements are presented Together both processes offer an elegant and convenient approach to the synthesis of many complex molecules which are normally difficult to synthesize via alternative routes It appears that domino and intramolecular rearrangements are ideally suited to synthesize certain specific modified monosaccharides What is particularly important is that both processes are intermolecular and almost always yield products with very well defined stereochemistry This high definition is absolutely crucial when synthesizing advanced modified mono and oligosaccharides The choice of contributors reflects an emphasis on both therapeutic and pharmacological aspects of carbohydrate chemistry
