Modulation Transfer Function in Optical and Electro-optical Systems Glenn D. Boreman, 2001 This tutorial introduces the theory and applications of MTF used to specify the image quality achieved by an imaging system It covers basic linear systems theory and the relationship between impulse response resolution MTF OTF PTF and CTF Practical measurement and testing issues are discussed Superresolution Optical Microscopy Barry R. Masters, 2020-03-21 This book presents a comprehensive and coherent summary of techniques for enhancing the resolution and image contrast provided by far field optical microscopes It takes a critical look at the body of knowledge that comprises optical microscopy compares and contrasts the various instruments provides a clear discussion of the physical principles that underpin these techniques and describes advances in science and medicine for which superresolution microscopes are required and are making major contributions The text fills significant gaps that exist in other works on superresolution imaging firstly by placing a new emphasis on the specimen a critical component of the microscope setup giving equal importance to the enhancement of both resolution and contrast Secondly it covers several topics not typically discussed in depth such as Bessel and Airy beams the physics of the spiral phase plate vortex beams and singular optics photoactivated localization microscopy PALM stochastic optical reconstruction microscopy STORM structured illumination microscopy SIM and light sheet fluorescence microscopy LSM Several variants of these techniques are critically discussed Noise optical aberrations specimen damage and artifacts in microscopy are also covered The importance of validation of superresolution images with electron microscopy is stressed Additionally the book includes translations and discussion of seminal papers by Abbe and Helmholtz that proved to be pedagogically relevant as well as historically significant This book is written for students researchers and engineers in the life sciences medicine biological engineering and materials science who plan to work with or already are working with superresolution light microscopes The volume can serve as a reference for these areas while a selected set of individual chapters can be used as a textbook for a one semester undergraduate or first year graduate course on superresolution microscopy Moreover the text provides a captivating account of curiosity skepticism risk taking innovation and creativity in science and technology Good scientific practice is emphasized throughout and the author's lecture slides on responsible conduct of research are included as an online resource which will be of interest to students course instructors and scientists alike *Basic Electro-optics for Electrical Engineers* Glenn D. Boreman, 1998 Topics covered by this text include imaging radiometry source detectors and lasers with a special emphasis on flux transfer issues The author takes a first order approach so that students and professionals can quickly make the back of envelope calculations needed for initial setup of optical apparatus The target is to help readers solve the practical problems frequently encountered by those new to the field of electro optics The text aims to enable readers to answer such questions as where is the image how big is it how much light gets to the detectors and how small an object is it possible to see American Book
