Selected Papers Volume 1 Stellar Structure And Stellar Atmospheres:

Selected Papers, Volume 1 Subrahmanyan Chandrasekhar, 1989-04-26 This is the first of six volumes collecting significant papers of the distinguished astrophysicist and Nobel laureate S Chandrasekhar His work is notable for its breadth as well as for its brilliance his practice has been to change his focus from time to time to pursue new areas of research The result has been a prolific career full of discoveries and insights some of which are only now being fully appreciated Chandrasekhar has selected papers that trace the development of his ideas and that present aspects of his work not fully covered in the books he has periodically published to summarize his research in each area Volume 1 Stellar Structure and Stellar Atmospheres covers primarily the period 1930 40 and includes early papers on the theory of white dwarfs In the Preface Chandrasekhar explains the criteria for selection and provides historical background Each subsequent volume will include a foreword by an authority on the topics covered Compendium of Practical Astronomy Günter D. Roth, 2012-12-06 It is a pleasure to present this work which has been well received in German speaking countries through four editions to the English speaking reader We feel that this is a unique publication in that it contains valuable material that cannot easily if at all be found elsewhere We are grateful to the authors for reading through the English version of the text and for responding promptly for the most part to our queries Several authors have supplied us on their own initiative or at our suggestion with revised and updated manuscripts and with supplementary English references We have striven to achieve a translation of Handbuch for Sternfreunde which accurately presents the qualitative and quantitative scientific principles contained within each chapter while maintaining the flavor of the original German text Where appropriate we have inserted footnotes to clarify material which may have a different meaning and or application in English speaking countries from that in Germany When the first English edition of this work Astronomy A Handbook translated by the late A Beer appeared in 1975 it contained 21 chapters This new edition is over twice the length and contains 28 authored chapters in three volumes At Springer's request we have devised a new title Compendium of Practical Astronomy to more accurately reflect the broad spectrum of topics and the vast body of information contained within these pages *Selected Papers, Volume 6* Subrahmanyan Chandrasekhar, 1991-04-09 This is the first of six volumes collecting significant papers of the distinguished astrophysicist and Nobel laureate S Chandrasekhar His work is notable for its breadth as well as for its brilliance his practice has been to change his focus from time to time to pursue new areas of research The result has been a prolific career full of discoveries and insights some of which are only now being fully appreciated Chandrasekhar has selected papers that trace the development of his ideas and that present aspects of his work not fully covered in the books he has periodically published to summarize his research in each area Guide to Information Sources in Mathematics and Statistics Martha A. Tucker, Nancy D. Anderson, 2004-09-30 This book is a reference for librarians mathematicians and statisticians involved in college and research level mathematics and statistics in the 21st century We are in a time of transition in scholarly

communications in mathematics practices which have changed little for a hundred years are giving way to new modes of accessing information Where journals books indexes and catalogs were once the physical representation of a good mathematics library shelves have given way to computers and users are often accessing information from remote places Part I is a historical survey of the past 15 years tracking this huge transition in scholarly communications in mathematics Part II of the book is the bibliography of resources recommended to support the disciplines of mathematics and statistics These are grouped by type of material Publication dates range from the 1800 s onwards Hundreds of electronic resources some online both dynamic and static some in fixed media are listed among the paper resources Amazingly a majority of listed electronic resources are free *Literature 1989, Part 1* Astronomisches Rechen-Institut,2013-11-11 From the reviews Astronomy and Astrophysics Abstracts has appeared in semi annual volumes since 1969 and it has already become one of the fundamental publications in the fields of astronomy astrophysics and neighbouring sciences It is the most important English language abstracting journal in the mentioned branches The abstracts are classified under more than a hundred subject categories thus permitting a quick survey of the whole extended material The AAA is a valuable and important publication for all students and scientists working in the fields of astronomy and related sciences As such it represents a necessary ingredient of any astronomical library all over the world Space Science Review Dividing the whole field plus related subjects into 108 categories each work is numbered and most are accompanied by brief abstracts Fairly comprehensive cross referencing links relevant papers to more than one category and exhaustive author and subject indices are to be found at the back making the catalogues easy to use The series appears to be so complete in its coverage and always less than a year out of date that I shall certainly have to make a little more space on those shelves for future volumes The Observatory Magazine The Observatory ,1990 Black Holes & Time Warps: Einstein's Outrageous Legacy (Commonwealth Fund Book Program) Kip Thorne,1995-01-17 Winner of the 2017 Nobel Prize in Physics Ever since Albert Einstein s general theory of relativity burst upon the world in 1915 some of the most brilliant minds of our century have sought to decipher the mysteries bequeathed by that theory a legacy so unthinkable in some respects that even Einstein himself rejected them Which of these bizarre phenomena if any can really exist in our universe Black holes down which anything can fall but from which nothing can return wormholes short spacewarps connecting regions of the cosmos singularities where space and time are so violently warped that time ceases to exist and space becomes a kind of foam gravitational waves which carry symphonic accounts of collisions of black holes billions of years ago and time machines for traveling backward and forward in time Kip Thorne along with fellow theorists Stephen Hawking and Roger Penrose a cadre of Russians and earlier scientists such as Oppenheimer Wheeler and Chandrasekhar has been in the thick of the quest to secure answers In this masterfully written and brilliantly informed work of scientific history and explanation Dr Thorne a Nobel Prize winning physicist and the Feynman Professor of Theoretical Physics Emeritus at Caltech leads his readers through an elegant always human tapestry of interlocking themes

coming finally to a uniquely informed answer to the great question what principles control our universe and why do physicists think they know the things they think they know Stephen Hawking's *A Brief History of Time* has been one of the greatest best sellers in publishing history Anyone who struggled with that book will find here a more slowly paced but equally mind stretching experience with the added fascination of a rich historical and human component Winner of the Phi Beta Kappa Award in Science **Historical Studies in the Physical and Biological Sciences**, 1990 **American Journal of Physics**, 1990 *Astronomy and Astrophysics Monthly Index*, 1989 **Journal of the British Interplanetary Society** British Interplanetary Society, 1990 Bound with vol 1 1934 is the Society's annual report and list of members 1934
