SELECTED TOPICS IN MOLECULAR PHYSICS- PROCEEDINGS OF AN INTERNATIONAL SYMPOSIUM. ,

Selected topics in molecular physics ,1972 *Selected Topics in Applications of Quantum Mechanics* Mohammad Reza Pahlavani,2015-05-13 This book has two sections The section Selected Topics in Applications of Quantum Mechanics provides seven chapters about different applications of quantum mechanics in science and technology The section Selected Topics in Foundations of Quantum Mechanics provides seven chapters about the foundations of quantum mechanics This book is written by a community of expert scientists from different research institutes and universities from all over the world Without a doubt quantum mechanics is the greatest discovery of the 20th century Therefore its history and foundations are of great interest to scientists and students This book covers some of the applications of quantum mechanics in nuclear physics medical science information technology atomic physics and material science as well as selected topics of quantum mechanics through different bases and ideas about quantum mechanics The basic idea of the publication of this book is to make scientists and researchers as well as graduate students familiar with the foundations of quantum mechanics *Education and Professional Employment in the U.S.S.R.* Nicholas De Witt,National Science Foundation (U.S.),1961 **Selected Topics in the History of Biochemistry. Personal Recollections. Part III** G. Semenza,R. Jaenicke,2012-12-02 As in Volumes 35 and 36 the chapters in this new volume complement with personal recollections the History of Biochemistry that was covered in the Comprehensive Biochemistry Series Volumes 30 33 by M Florkin and Volume 34A by P Laszlo The biographical and autobiographical chapters will convey to the reader a lively albeit at times subjective view of the scientific and social environment in which the authors have worked resulting in new concepts and theories on the biological sciences *Select Topics of Econophysics* Amit Sinha,2024-11-04 Economics requires understanding and analyzing forces that bring buyers and sellers to a market place who then negotiate exchanges of goods and services based on a mutually agreeable price Economists have their own method of modeling whereby models are first conceived of some notion of economic and financial thinking before being empirically tested and anomalies are then recognized if the observed data is inconsistent with the hypothetical underpinning This is in inherent contradiction with the modeling approaches of physicists who develop their theories principle and laws after observing empirical data The awareness that physics can enlighten the understanding of human behavior and thus economics and the interest of physicists in applying their training and models to understanding the complexities of finance and economics led to the creation of a new field of study appropriately termed as Econophysics Selected Topics on Econophysics is a collection of essays on topics that enhance and enrich our understanding of economic modeling when the same rigor of modelling used by physicists is brought to developing financial and economic theories These articles include discussions on modeling bitcoins stock index modeling using geometric Brownian motion agent based modeling wealth distribution modeling as well as modeling related to fractal regression and chaotic processes This

interdisciplinary book will interest researchers graduate students and professionals in the fields of economics finance as well as physics

Special Topics H. S. W. Massey, E. W. McDaniel, B. Bederson, 2013-10-22 **Applied Atomic Collision Physics** Volume 5 Special Topics deals with topics on applications of atomic collisions that were not covered in the first four volumes of the treatise The book opens with a chapter on ultrasensitive chemical detectors This is followed by separate chapters on lighting magnetohydrodynamic electrical power generation gas breakdown and high voltage insulating gases thermionic energy converters and charged particle detectors Subsequent chapters deal with the operation of multiwire drift and proportional chambers and streamer chambers and their use in high energy physics experiments photoelectron spectroscopy of negative ions and the chemical information that can be obtained from such studies and the determination of intermolecular potentials Also discussed are studies on the determination of ion molecular potential curves using photodissociative processes determination of negative ion thermo chemical data using ion neutral reactions gas phase chemical reactions collision phenomena in electrical discharge lamps and military applications of atomic and molecular physics

Selected Scientific Papers of E.U. Condon E.U.
