Dyson, 1996 This book offers a unique compilation of papers in mathematics and physics from Freeman Dyson's 50 years of activity and research These are the papers that Dyson considers most worthy of preserving and many of them are classics The papers are accompanied by commentary explaining the context from which they originated and the subsequent history of the problems that either were solved or left unsolved This collection offers a connected narrative of the developments in mathematics and physics in which the author was involved beginning with his professional life as a student of G H Hardy *Fundamentals of Atmospheric Radiation* Craig F. Bohren, Eugene E. Clothiaux, 2006-08-21 Meeting the need for teaching material suitable for students of atmospheric science and courses on atmospheric radiation this textbook covers the fundamentals of emission absorption and scattering of electromagnetic radiation from ultraviolet to infrared and beyond Much of the contents applies to planetary atmosphere with graded discussions providing a thorough treatment of subjects including single scattering by particles at different levels of complexity The discussion of the simple multiple scattering theory introduces concepts in more advanced theories such that the more complicated two stream theory allows readers to progress beyond the pile of plates theory The authors are physicists teaching at the largest meteorology department in the US at Penn State The problems given in the text come from students colleagues and correspondents and the figures designed especially for this book facilitate comprehension Ideal for advanced undergraduate and graduate students of atmospheric science Free solutions manual available for lecturers at www.wiley-vch.de/supplements NASA Technical Translation, 1964 *Technical Translations*, **Selected Papers on Scattering in the Atmosphere** Craig F.
