## **Selected Papers On Optical Ship Metrology:**

Selected Papers from the 2018 IEEE International Workshop on Metrology for the Sea Attilio Di Nisio, Francesco Picariello, 2020-11-13 This Special Issue is devoted to recent developments in instrumentation and measurement techniques applied to the marine field The sea is the medium that has allowed people to travel from one continent to another using vessels even today despite the use of aircraft It has also been acting as a great reservoir and source of food for all living beings However for many generations it served as a landfill for depositing conventional and nuclear wastes especially in its deep seabeds and we are assisting in a race to exploit minerals and resources different from foods encompassed in it Its health is a great challenge for the survival of all humanity since it is one of the most important environmental components targeted by global warming As everyone may know measuring is a step that generates substantial knowledge about a phenomenon or an asset which is the basis for proposing correct solutions and making proper decisions However measurements in the sea environment pose unique difficulties and opportunities which is made clear from the research results presented in this Special Issue
