**Self-regulation of Learning and Performance** Dale H. Schunk, Barry J. Zimmerman, 2009. In recent years, educators have become increasingly concerned with students' attempts to manage their own learning and achievement efforts through activities that influence the instigation, direction, and persistence of those efforts. In 1989, Zimmerman and Schunk edited the first book devoted to this topic. They assembled key theorists offering a range of perspectives on how students self-regulate their academic functioning. One purpose of that volume was to provide theoretical direction to ongoing as well as nascent efforts to explore academic self-regulatory processes. Since that date, there has been an exponential surge in research. This second volume on academic self-regulation offers the fruits of the first generation of research. It also addresses a number of key issues that have arisen since then, such as how self-regulation differs from such related constructs as motivation and metacognition, and whether students can be taught self-regulatory skills. The contributors reveal an interesting, uplifting, and at times disturbing picture of how students grapple with the day-to-day problems of achieving in circumstances with inherent limitations and obstacles. This volume provides insight into the source of students' capabilities to surmount adversities, the origins of their self-initiated processes designed to improve learning, motivation, and achievement. The text is organized on the basis of a conceptual framework that analyzes academic self-regulation into four major dimensions. That model is presented in the first chapter, and key processes that influence each of these dimensions are discussed by prominent researchers in the chapters that follow. Because each chapter is written to follow a common format, this work provides a level of continuity and parsimony normally found only in authored textbooks.

*Handbook of Self-Regulation of Learning and Performance* Dale H. Schunk, Barry J. Zimmerman, 2011-05-15. Self-regulated learning or self-regulation refers to the process whereby learners personally activate and sustain cognitions, affects, and behaviours that are systematically oriented toward the attainment of learning goals. This is the first volume to integrate into a single volume all aspects of the field of self-regulation of learning and performance: basic domains, applications to content areas, instructional issues, methodological issues, and individual differences. It draws on research from such diverse areas as cognitive, educational, clinical, social, and organizational psychology. Distinguishing features include:

**Chapter Structure:** To ensure uniformity and coherence across chapters, each chapter author addresses the theoretical ideas underlying their topic, research evidence bearing on these ideas, future research directions, and implications for educational practice.

**International:** Because research on self-regulation is increasingly global, a significant number of international contributors are included (see table of contents).

**Readable:** In order to make the book accessible to students, chapters have been carefully edited for clarity, conciseness, and organizational consistency.

**Expertise:** All chapters are written by leading researchers from around the world who are highly regarded experts on their particular topics and are active contributors to the field.

Self-Regulated Learning and Academic Achievement Barry J. Zimmerman, Dale H. Schunk, 2013-05-13  
This volume brings together internationally known researchers representing different theoretical perspectives on students' self-regulation of learning. Diverse theories on how students become self-regulated learners are compared in terms of their conceptual origins, scientific form, research productivity, and pedagogical effectiveness. This is the only comprehensive comparison of diverse classical theories of self-regulated learning in print. The first edition of this text, published in 1989, presented descriptions of such differing perspectives as operant, phenomenological, social learning, volitional, Vygotskian, and constructivist theories. In this new edition, the same prominent editors and authors reassess these classic models in light of a decade of very productive research. In addition, an information processing perspective is included, reflecting its growing prominence. Self-regulation models have proven especially appealing to teachers, coaches, and tutors looking for specific recommendations regarding how students activate, alter, and sustain their learning practices. Techniques for enhancing these processes have been studied with considerable success in tutoring sessions, computer learning programs, coaching sessions, and self-directed practice sessions. The results of these applications are discussed in this new edition. The introductory chapter presents a historical overview of research and a theoretical framework for comparing and contrasting the theories described in the following chapters, all of which follow a common organizational format. This parallel format enables the book to function like an authored textbook rather than a typical edited volume. The final chapter offers an historical assessment of changes in theory and trends for future research. This volume is especially relevant for students and professionals in educational psychology, school psychology, guidance, and counseling, developmental psychology, child and family development, as well as for students in general teacher education.

*The Pursuit of Excellence Through Education* Michel Ferrari,2001-12 Although specific definitions may change over time few goals are considered more important to education than the pursuit of academic excellence There are many different viewpoints on this issue today among educational psychologists and other social scientists One particularly glaring fault line in the debate divides those who emphasize developing individual learning and those who focus on promoting cultural and institutional reform These two perspectives are rarely addressed in a single volume In this book well known theorists and researchers present a range of perspectives on how to promote excellence in education This allows those who stress transformation of educational practice and those who emphasize individual abilities to speak to each and invites readers to jointly consider the arguments for both positions or for some synthesis of the two The point is to consider how these two divergent viewpoints can be reconciled or simply coordinated in an effort to benefit both students and society at large The main thesis is that excellence can be fostered without sacrificing equity both of which are fundamental tenets of a democratic education The issues addressed in this book have implications and relevance for school reform efforts and across the fields of educational psychology curriculum and instruction philosophy of education and educational leadership The volume provides a unique source for students and teachers in various disciplines who want to gain a broader and more integrated view of the nature and development of excellence through education
