Self In Transition Infancy To Childhood:

The Self in Transition Dante Cicchetti, Marjorie Beeghly, 1990-11-08 Twenty four distinguished behavioral scientists present recent research on the self during the pivotal period of transition from infancy to childhood and place it in historical perspective citing earlier work of such figures as William James George Herbert Mead Sigmund Freud and Heinz Kohut Contributors are Elizabeth Bates Marjorie Beeghly Barbara Belmont Leslie Bottomly Helen K Buchsbaum George Butterworth Vicki Carlson Dante Cicchetti James P Connell Robert N Emde Jerome Kagan Robert A LeVine Andrew N Meltzoff Editha Nottelmann Sandra Pipp Marian Radke Yarrow Catherine E Snow L Alan Sroufe Gerald Stechler Sheree L Toth Malcolm Watson and Dennie Palmer Wolf *Developmental Psychopathology, Volume 1* Dante Cicchetti, Donald J. Cohen, 2006-03-24 *Developmental Psychopathology* Second Edition contains in three volumes the most complete and current research on every aspect of developmental psychopathology This seminal reference work features contributions from national and international expert researchers and clinicians who bring together an array of interdisciplinary work to ascertain how multiple levels of analysis may influence individual differences the continuity or discontinuity of patterns and the pathways by which the same developmental outcomes may be achieved This volume addresses theoretical perspectives and methodological issues including cross cultural perspectives developmental epidemiology self determination theory and gender issues

Reaching Into Thought Anne E. Russon, Kim A. Bard, Sue Taylor Parker, 1998-11-26 What special qualities of mind set the great apes apart from other nonhuman primates and indeed from ourselves In this book field and laboratory researchers show that the great apes have high level abilities in both social and ecological domains including tool use pretense self awareness deception consolation teaching and culture itself Great apes are also shown to be capable of thinking at symbolic levels traditionally considered to be uniquely human Here the mechanisms involved in building these abilities especially the lengthy developmental and enculturation processes are emphasized showing how new discoveries are changing views on how primates and human intelligence evolved This book is for anyone interested in current research and theoretical views of great ape cognition *The Developmental Psychopathology of Eating Disorders* Linda Smolak, Ruth H. Striegel-Moore, Michael P. Levine, 2013-01-11 Although eating problems ranging from body dissatisfaction and dieting to anorexia nervosa or bulimia nervosa can begin and typically have their roots in childhood theory and research in developmental psychopathology and developmental psychology have not received substantial attention in eating disorders research This book provides crucial background material from both fields and then makes direct applications to numerous aspects of the field of eating disorders including theory research treatment and primary prevention This book was born out of a transaction between frustration and optimism The frustrations reflected the limitations of current knowledge about eating problems and disorders Etiological causes which are sensitive and specific to eating disorders have been elusive Although there is some understanding of risk factors little is known about protective factors This has made prevention among other

things difficult Furthermore the mechanisms underlying the association between risk factors and disordered eating are poorly understood For example it is known that women are at greater risk than men are but clinicians are hard pressed to get beyond gender based speculations and demonstrate why this is true The optimism grows from familiarity with the field of developmental psychopathology It seems evident that this approach has much to offer the field of eating disorders This book is an early step in the integration of developmental psychopathology into theorizing research treatment and prevention of eating disorders It addresses four specific goals to introduce the principles and methodologies of developmental psychopathology to review the work of developmental psychologists in several major areas of behavior relevant to understanding the causes treatment and prevention of eating disorders to apply developmental psychopathology principles to the area of eating disorders both in the form of theoretical models and in specific areas issues raised by developmental psychopathology and to discuss the implications of developmental approaches for prevention programs and treatments

Social Development as Preference Management Rachel Karniol, 2010-04-12 Karniol engagingly presents social development in children through the language of preference management Conversational excerpts garnered from around the world trace how parents talk about preferences how infants and children s emergent language conveys their preferences how children themselves are impacted by others preferences and how they in turn influence the preferences of adults and peers The language of preferences is used to crack into altruism aggression and morality which are ways of coming to terms with other people s preferences Behind the scenes is a cognitive engine that uses transformational thought conducting temporal imaginal and mental transformations to figure out other people s preferences and to find more sophisticated means of outmanoeuvring others by persuading them and playing with one s own mind and other people s minds when preferences are blocked This book is a unique and sometimes amusing must read for anyone interested in child development language acquisition socialisation and communication

Communication in Atypical Infants and Toddlers Christina F. Papaeliou, 2024-05-14 This book presents a comparative review of the latest studies and data on prelinguistic communication and early semantic development in autism spectrum disorder ASD Williams syndrome WMS attention deficit hyperactivity disorder ADHD and early language delay Papaeliou offers a critical analysis of the literature compares key theoretical approaches and interprets data on development in atypical populations A fruitful synthesis of theory and research reveals that instead of cognitive deficits the core feature of these neurodevelopmental disorders consists of deficits in the ability for self and intersubjective coordination which adversely affects early interactions and consequently the emergence of language The book composes fragmentary proposals on the role of rhythm disruptions in different conditions setting out the idea that disruption in interactional synchrony is a connecting thread through neurodevelopmental disorders which show high prevalence or high comorbidity rates Papaeliou identifies distinct communicative patterns characteristic of each disorder and puts forward a unifying theory for interpreting data on early communication and language development in atypical populations This is ideal reading for psychologists psycholinguists psychiatrists paediatricians speech therapists and special educators Students in developmental psychology and anyone interested in understanding the research behind typical and atypical development will also benefit from this text
