The Woman Patient Malkah Notman,2013-11-11 This volume presents the knowledge views and experiences of experts in the fields of health care that are particularly important to women Not all of the authors agree on all of the issues but all share the same concerns about women's health and recognize the importance of providing information to enable women to become active participants in the health care partnership The idea for the book evolved from our own work in the field of women's health care The positive responses we received to several papers and presentations based on our experiences and addressed to patients physicians and other health care professionals indicated that there is a growing need for open discussion of women's health care issues as well as a need for developing and implementing new and better ways of dealing with these issues We were further motivated by the repeated failure of the health care community to integrate new insights and information that frequently contradict older established beliefs and practices into current health planning education and practice

The Well-Being Project Jean Campbell, Ron Schraiber, In 1987 a groundbreaking survey called The Well Being Project was conducted by the California Network of Mental Health Clients under contract to the Office of Prevention of the California Department of Mental Health to explore what factors promote or deter the well being of those diagnosed labeled as mentally ill Initially it had been assumed that the analysis of the survey

data as well as the final written report would be awarded to a university or other professional research group. Much to the surprise of some and in the spirit of the disability rights movement rallying cry of nothing about us without us, the successful proposal was written by mental health client researchers Jean Campbell and Ron Schraiber on behalf of the California Network of Mental Health Clients. The study became known as The Well Being Project: Mental Health Clients Speak for Themselves and was published in 1989. Additionally, an award-winning documentary *People Say I'm Crazy* based on the study's findings was produced, as well as a compendium book to the video with the same title.

Communication and Disenfranchisement Eileen Berlin Ray, 2013-12-02. This volume and its companion case studies book deal with some of the people, groups, and classes who are living a disenfranchised existence in the United States. Whether through birth, life events, or unfortunate circumstances, they are denied full privileges, rights, and power within the existing societal structure. Centered around societal health problems as they relate to socioeconomic status, family abuse, and health concerns, these volumes examine salient issues from several theoretical frameworks, including feminist theory and the social construction of reality. *Communication and Disenfranchisement* provides theory-based essays on topics such as the homeless adult survivors of sexual assault, battered women, persons with disabilities, impoverished women, the indigent living in the inner city, persons with HIV/AIDS, the terminally ill, and the elderly. *Case Studies in Communication and Disenfranchisement* provides parallel case studies applying the issues and concepts discussed in the essays. Used together, these books provide theoretically based applications of social health issues within a communication framework. Traditionally, health communication research has emphasized the communication-physical health relationship. Inadvertently, this primary focus has restricted what information has been included under the domain of health communication. These books expand that domain by examining how the communication-disenfranchisement relationship is accomplished, managed, and overcome, and by recognizing the significance of the pragmatic and theoretic implications of this inquiry.

Science and Pseudoscience in Clinical Psychology, First Edition Scott O. Lilienfeld, Steven Jay Lynn, Jeffrey M. Lohr, 2012-02-21. This is the first major text designed to help professionals and students evaluate the merits of popular yet controversial practices in clinical psychology, differentiating those that can stand up to the rigors of science from those that cannot. Leading researchers review widely used therapies for alcoholism, infantile autism, ADHD, and posttraumatic stress disorder; herbal remedies for depression and anxiety; suggestive techniques for memory recovery; and self-help models. Other topics covered include issues surrounding psychological expert testimony, the uses of projective assessment techniques, and unanswered questions about dissociative identity disorder. Providing knowledge to guide truly accountable mental health practice, the volume also imparts critical skills for designing and evaluating psychological research programs. It is ideal for use in advanced undergraduate and graduate level courses in clinical psychology, psychotherapy, and evidence-based practice.
