Semantics And Language Analysis:

Semantics and Language Analysis Robert L. Benjamin, 1970-01-01 *Problems of Semantics* L. Tondl, 2012-12-06

Ladislav Tondl's insightful investigations into the language of the sciences bear directly upon some decisive points of confrontation in modern philosophy of science and of language itself. In the decade since his *Scientific Procedures* was published in English (Boston Studies 11), Dr. Tondl has enlarged his original monograph of 1966 on the problems and achievements of modern semantics. The main topic of his later work has been semantic information theory. A Russian translation considerably expanded as a second edition was published in 1975 (Moscow: Progress Publishers) with an appreciative critical commentary in the form of a conclusion by Professor Avenir I. Uemov of Odessa. Indeed, many Soviet studies in the problems of the semantics of science show the same sort of philosophical curiosity about the relationship of meanings in scientific language to procedures in scientific epistemology that characterizes Tondl's work as in the work of Mirislav Popovich (Kiev) and Vadim Sadovsky (Moscow) and their colleagues. But we know that interest in these matters is world-wide, ranging from such classical topics as sense and denotation, empiricist reduction, vagueness and denotational opacity to the new and equally exciting topics of the semantics of non-unique preference choices, the nuances of informational synonymy, and the semantics of a picture shape so briefly but beautifully sketched in Tondl's dense and promising last chapter. We are pleased to have had Tondl's kind cooperation in producing this English edition, actually a third edition of his research about semantics.

Semantic Similarity from Natural Language and Ontology Analysis Sébastien

Harispe, Sylvie Ranwez, Stefan Janaqi, Jacky Montmain, 2022-05-31 Artificial Intelligence federates numerous scientific fields in the aim of developing machines able to assist human operators performing complex treatments, most of which demand high cognitive skills, e.g. learning or decision processes. Central to this quest is to give machines the ability to estimate the likeness or similarity between things in the way human beings estimate the similarity between stimuli. In this context, this book focuses on semantic measures, approaches designed for comparing semantic entities such as units of language, e.g. words, sentences or concepts, and instances defined into knowledge bases. The aim of these measures is to assess the similarity or relatedness of such semantic entities by taking into account their semantics, i.e. their meaning. Intuitively, the words *tea* and *coffee*, which both refer to stimulating beverage, will be estimated to be more semantically similar than the words *toffee*, *confection* and *coffee*, despite that the last pair has a higher syntactic similarity. The two state-of-the-art approaches for estimating and quantifying semantic similarities, relatedness of semantic entities, are presented in detail. The first one relies on corpora analysis and is based on Natural Language Processing techniques and semantic models, while the second is based on more or less formal, computer-readable and workable forms of knowledge such as semantic networks, thesauri or ontologies. Semantic measures are widely used today to compare units of language, concepts, instances or even resources indexed by them, e.g. documents, genes. They are central elements of a large variety of Natural Language Processing applications and

knowledge based treatments and have therefore naturally been subject to intensive and interdisciplinary research efforts during last decades Beyond a simple inventory and categorization of existing measures the aim of this monograph is to convey novices as well as researchers of these domains toward a better understanding of semantic similarity estimation and more generally semantic measures To this end we propose an in depth characterization of existing proposals by discussing their features the assumptions on which they are based and empirical results regarding their performance in particular applications By answering these questions and by providing a detailed discussion on the foundations of semantic measures our aim is to give the reader key knowledge required to i select the more relevant methods according to a particular usage context ii understand the challenges offered to this field of study iii distinguish room of improvements for state of the art approaches and iv stimulate creativity toward the development of new approaches In this aim several definitions theoretical and practical details as well as concrete applications are presented
