**Shortcut Reasoning - Mathematics Series 2** , *A Primer for a Secret Shortcut to PDEs of Mathematical Physics* Des McGhee, Rainer Picard, Sascha Trostorff, Marcus Waurick, 2020-08-24 This book presents a concise introduction to a

unified Hilbert space approach to the mathematical modelling of physical phenomena which has been developed over recent years by Picard and his co workers The main focus is on time dependent partial differential equations with a particular structure in the Hilbert space setting that ensures well posedness and causality two essential properties of any reasonable model in mathematical physics or engineering However the application of the theory to other types of equations is also demonstrated By means of illustrative examples from the straightforward to the more complex the authors show that many of the classical models in mathematical physics as well as more recent models of novel materials and interactions are covered or can be restructured to be covered by this unified Hilbert space approach The reader should require only a basic foundation in the theory of Hilbert spaces and operators therein For convenience however some of the more technical background requirements are covered in detail in two appendices The theory is kept as elementary as possible making the material suitable for a senior undergraduate or master s level course In addition researchers in a variety of fields whose work involves partial differential equations and applied operator theory will also greatly benefit from this approach to structuring their mathematical models in order that the general theory can be applied to ensure the essential properties of well posedness and causality
