*Low-Calorie Foods and Food Ingredients* R. Khan, 2012-12-06 amounts can produce a deleterious effect on animals In an attempt to quantify this potential for toxicity and to give sufficient margin for safety JECFA has introduced an acceptable daily intake ADI level for food additives For example the ADI values granted for saccharin aspartame cyclamate acesulfame K and sucralose are 2 5 40 11 9 and 1 3 5 mg kg body weight per day respectively Chapter 2 on regulatory aspects of low calorie food elaborates these points The additives that are to be consumed in large amounts such as a fat replacement product like Olestra or a new bulking material like polydextrose present a more complex problem as far as the evaluation of their toxicity is concerned Normal safety testing of an additive such as a high intensity sweetener requires that the test animals are fed with a sufficiently high dosage in order to produce an effect and then on that basis an ADI value is calculated In cases like Olestra and polydextrose which are not normally present in diet or metabolised to dietary constituents such an approach will obviously not be applicable or of any use in calculating an ADI value Due to these factors the regulatory authorities have not yet been able to produce any guidelines for toxicity trials for additives that are to be taken in food in large quantities Low-calorie Foods and Food Ingredients Riaz Khan, 1993
