The Art of War for Talent.

How Companies Can Gain a Competitive Advantage by Fostering a Culture of Intrinsic Motivation and Meaningful Work

Niklas Baier, 2020-04-23 Bachelor Thesis from the year 2019 in the subject Business economics Review of Business Studies grade 1 3 Technical University of Munich TUM School of Management Chair for Management Accounting language English abstract The bachelor thesis combines theories literature lab and field experiments event studies from the industry and its very own empirical research to argue from both a strategic as well as a financial perspective that an inimitable organizational culture of intrinsic motivation and meaningful work may constitute a source of competitive advantage within the War for Talent The thesis strives at highlighting the importance for firms to adapt to the newly emerged competitive environment that the ongoing War for Talent has created by considering their people as their most valuable asset for the success of the organization as already hinted at throughout The Art of War by Sun Tzu in 500 BC hence the reference in the title of this thesis After a brief review of the circumstances that led to the emergence of the War for Talent and first implications for the industry it is argued from a strategic perspective why motivated talent depicts the key resource for competitive advantage and why conventional extrinsic incentive measures aimed at maximizing productivity are no longer effective Afterwards a proposition will be made of how capitalizing on intrinsic motivation human s inner drive to accomplish inherently interesting and challenging tasks fostered through a framework of meaningful work might be the decisive driver to get ahead in the quest for talent A second string of argumentation draws a connection between meaningful work and superior financial performance This proposition is then tested by an empirical analysis comparing the financial performance of publicly traded companies featured on the 2017 Fortune 100 Best Companies to Work For list against a control portfolio and the broad market confirming significant differences for cumulative stock returns

Dialogue and Difference in a Teacher Education

Program Marilyn Johnston-Parsons,2012-05-01 This book is a longitudinal study of a 10 year experimental teacher education program Follow up studies and writing continued for 6 years after the program closed This case study describes a search for effective and socially just practices within a long term reform initiative intended to prepare teachers for urban schools The program was run through a Professional Development School a collaboration between a university program and a diverse group of practicing teachers and the book was written collaboratively by many of the participants faculty mentor teachers doctoral students and teacher candidates graduates There are few longitudinal studies of teacher education programs especially ones that focus on what was learned and told by those who did the learning The narratives here are rich diverse and multivocal They capture the complexity of a reform initiative conducted within a democratic context It s difficult messy and as varied as is democracy itself The program was framed by a sociocultural perspective and the focus was on learning through difference Dialogue across difference which is more than just talk was both the method for doing research and the means for learning The program described here began in the ferment of teacher education reform in the early 1990s responding to the critics of the mid 1980s and this account of it is finished at a time when teacher education is again under attack from a different direction Criticized earlier for being too progressive teacher education is now seen as too conservative The longitudinal results of this program show high retention rates and ground the argument that quality teacher preparation programs for teaching in urban schools may well be cost effective as well as provide increased student learning This is counter to the current move to shorten teacher preparation programs at a time of low teacher retention in our under resourced urban schools The book does not advocate a model for teacher education but it aims to provide principles for practice that include school university collaboration democratic dialogue across differences and inquiry as a way to guide reform

Morality by

Degrees Alastair Norcross,2020-03-25 In *Morality by Degrees* Alastair Norcross articulates and defends a radical new approach to ethical theory Consequentialist theories of the right connect the rightness and wrongness and related notions of actions with the intrinsic goodness and badness of states of affairs consequential on those actions The most popular such theory is maximization which is said to demand of agents that they maximize the good that they do the best they can at all times Thus it may seem that consequentialist theories are overly demanding and relatedly that they cannot accommodate the phenomenon of going above and beyond the demands of duty However a clear understanding of consequentialism leaves no room for a theory of the right at least not at the fundamental level of the theory A consequentialist theory such as utilitarianism is a theory of how to rank outcomes and derivatively actions which provides reasons for choosing some actions over others It is thus a purely scalar theory with no demands that certain actions be performed and no fundamental classification of actions as right or wrong However such notions may have pragmatic benefits at the level of application since

many people find it easier to guide their conduct by simple commands rather than to think in terms of reasons of varying strength to do one thing rather than another A contextualist semantics for various terms such as right permissible harm when combined with the scalar approach to consequentialism allows for the expression of truth apt propositions with sentences containing such terms **New York Produce Review and American Creamery ,1917** Marketing Research Bruce Wrenn,Robert E.
