Making Crime Count:

Making Crime Count Kevin D. Haggerty, 2001-01-01 Haggerty sheds light on the gathering and disseminating of crime statistics through an examination of the Canadian Centre for Justice Statistics the branch of Statistics Canada responsible for producing data on the criminal justice system

Making Crime Count Kevin D. Haggerty, 2001 Official statistics are one of the most important sources of knowledge about crime and the criminal justice system Yet little is known about the inner workings of the institutions that produce these numbers In this groundbreaking study Kevin D Haggerty sheds light on the process involved in the gathering and disseminating of crime statistics through an empirical examination of the Canadian Centre for Justice Statistics CCJS the branch of Statistics Canada responsible for producing data on the criminal justice system Making Crime Count details how the availability of criminal justice statistics has fostered a distinctive approach to the governance of crime and criminal justice What has emerged is a form of actuarial justice whereby crime is increasingly understood as a statistical probability rather than a moral failing At the same time statistics render criminal justice organizations amenable to governmental strategies that aim to manage the system itself Using contemporary work in the sociology of science as a frame Haggerty explores the means by which the CCJS has been able to produce its statistics The emphasis is on the extra scientific factors involved in this process the complex knowledge networks that must be aligned between assorted elements and institutions and specifically the continual negotiations between CCJS employees and the police over how to secure data for the uniform crime report survey The conclusions accentuate the need for anyone studying governance to consider the politics and processes of governmental knowledge production

Making History Count C. H. Feinstein, Mark Thomas, 2002 Making History Count introduces the main quantitative methods used in historical research The emphasis is on intuitive understanding and application of the concepts rather than formal statistics no knowledge of mathematics beyond simple arithmetic is required The techniques are illustrated by applications in social political demographic and economic history Students will learn to read and evaluate the application of the quantitative methods used in many books and articles and to assess the historical conclusions drawn from them They will also see how quantitative techniques can open up new aspects of an enquiry and supplement and strengthen other methods of research This textbook will encourage students to recognize the benefits of using quantitative methods in their own research projects The text is clearly illustrated with tables graphs and diagrams leading the student through key topics Additional support includes five specific historical data sets available from the Cambridge website

How Countries Count Crime John A. Eterno, Arvind Verma, Eli B. Silverman, 2022-09-30 This edited collection illuminates the weaknesses and strengths of crime reporting across a wide range of countries with a focus on democratic countries in which the police bear some accountability to citizens In one compendium for the first time this book documents how different countries record or fail to record crimes With chapters written by native authors who are experts on the practices of their respective countries the book explores practices in 15

different countries across the globe Organized with a parallel country by country approach the book describes and analyzes methods police use to record crimes with the awareness that the counting of crimes is not only an issue of empirical measurement but also one of social construction Crime reporting practices vary widely by country In some cases reports are not taken and in others reports are carefully based on preliminary investigations Willful manipulation of crime reports can and does occur and the book explores related factors such as political pressure personal ambition community safety and more Discussion questions at the end of each chapter help the reader evaluate the significant issues influencing each country The editors conclude by suggesting best practices for crime reporting and the collection of crime data A unique addition to this book is a foreword by Tofiq Murshudlu the Head of Drugs and Crime for the United Nations in Vienna The book is intended for a wide range of audiences including policing scholars law enforcement and community leaders and students of criminal justice

Making It Count Stanley Lieberman, 1987-03-16 This title reexamines and reconsiders the model of empirical research underlying most empirical work The goal is neither a whitewash nor capital punishment but rather it is to reform and mold empirical research into an activity that contributes as much as possible to a rigorous understanding of society Without worrying about defining science or even determining the essence of the scientific enterprise the goal is one that pools together logical thinking and empirically determined information One of the fundamental issues to be addressed in this volume Are there questions currently studied that are basically unanswerable even if the investigator had ideal nonexperimental data If so what are the alternative questions that can be dealt with successfully by empirical social research and how should they be approached In the chapters ahead it will be important to keep in mind this doctrine of the undoable Of course one cannot simply mutter undoable when a difficult obstacle is encountered turn off the computer and look in the want ads for a new job or at least a new task Instead it means considering if there is some inherent logical reason or sociological force that makes certain empirical questions unanswerable There are four types of undoable questions to consider those that are inherently impossible those that are premature those that are overly complicated and those that empirical and theoretical knowledge have nullified

The Science of Crime Measurement Martin A. Andresen, 2014-01-03 Crime statistics are ubiquitous in modern society but how accurate are they This book investigates the science of crime measurement focussing on four main questions how do we count crime How do we calculate crime rates Are there other measurements of crime What are the issues surrounding crime statistics All too often we take the measurement of crime at face value when there is in fact a science behind it This book specifically deals with issues related to spatially referenced crime data that are used to analyse crime patterns across the urban environment The first section of the book considers alternative crime rate calculations The second section of the book contains a thorough discussion of a measure of crime specialisation Finally the third section of the book addresses a number of aggregation issues that are present with such data crime type aggregations temporal aggregations of crime data the stability of crime patterns over time and the importance of

spatial scale This book builds on a growing body of literature on the science of crime measurement and offers a comprehensive account of this growing subfield of criminology The book speaks to wider debates in the fields of crime analysis environmental criminology and crime prevention and will be perfect reading for advanced level undergraduate and graduate students looking to find out more about the measurement of crime **Modernizing Crime Statistics** National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Committee on Law and Justice, Committee on National Statistics, Panel on Modernizing the Nation's Crime Statistics, 2016-06-30 To derive statistics about crime to estimate its levels and trends assess its costs to and impacts on society and inform law enforcement approaches to prevent it a conceptual framework for defining and thinking about crime is virtually a prerequisite Developing and maintaining such a framework is no easy task because the mechanics of crime are ever evolving and shifting tied to shifts and development in technology society and legislation Interest in understanding crime surged in the 1920s which proved to be a pivotal decade for the collection of nationwide crime statistics Now established as a permanent agency the Census Bureau commissioned the drafting of a manual for preparing crime statistics intended for use by the police corrections departments and courts alike The new manual sought to solve a perennial problem by suggesting a standard taxonomy of crime Shortly after the Census Bureau issued its manual the International Association of Chiefs of Police in convention adopted a resolution to create a Committee on Uniform Crime Records to begin the process of describing what a national system of data on crimes known to the police might look like The key distinction between the rigorous classification proposed in this report and the classifications that have come before in U S crime statistics is that it is intended to partition the entirety of behaviors that could be considered criminal offenses into mutually exclusive categories **Modernizing Crime Statistics Report 1 Defining and Classifying Crime** assesses and makes recommendations for the development of a modern set of crime measures in the United States and the best means for obtaining them This first report develops a new classification of crime by weighing various perspectives on how crime should be defined and organized with the needs and demands of the full array of crime data users and stakeholders **Criminalization, Representation, Regulation** Deborah Brock, Amanda Glasbeek, Carmela Murdocca, 2014-01-01 This book draws on Foucault's concept of governmentality as a lens to analyze and critique how crime is understood reproduced and challenged **The Routledge Handbook of Chinese Criminology** Liqun Cao, Ivan Y. The Mutual Construction of Statistics and Society Ann Rudinow Saetnan, Heidi Mork Lomell, Svein Hammer, 2010-09-13 Statistics are often seen as simple straightforward and objective descriptions of society However what we choose to count what we choose not to count who does the counting and the categories and values we choose to apply when counting matter This volume addresses the ways in which statistics and numbers are gathered and applied in social science research The contributors argue that we must become more aware of the power and the limitations of statistics Learning statistics needs to be about more than simply mastering the techniques of using the tool it needs to also be about learning the dangers of that tool and learning to control it within social and ethical bounds These dangers lie in the routines through which statistics are applied the discourses from which they emerge and into which they are deployed the

power relations created by those discourses and the assumptions meanings and categories statistics carry with them in those discourses This volume will be necessary reading for students and scholars using quantitative data within the social sciences

Crime Statistics in the News Jairo Lugo-Ocando,2017-10-06 This book offers a comparative exploration of how journalists across different newsrooms around the world access and interpret statistics when producing stories related to crime Looking at the nature of news sources regularly used by journalists Lugo Ocando analyses how these numbers are used to report crime As the author argues far from being straightforward the relationship between numbers and journalists in the context of crime reporting is complex and at times problematic Because the reporting of crime statistics impacts upon policymaking we need to better understand how these statistics are used and reported in order to improve the process of decision Finally Lugo Ocando maintains that the only way to create a fairer justice system and a better informed general public is by improving the way crime is covered in the news A compelling and informed text this book will be of interest to scholars and students of criminology and journalism alike
