Making Of Telecommunications Policy:

The Making of Telecommunications Policy Dick Olufs, 1999 The Making of Telecommunications Policy examines the history politics and impact of telecommunications policy Beginning with a comparison of several alternate views of the future Olufs explains how government action makes the widespread use of some new technologies more likely than others He details the challenges that rapid advances in communications technologies pose for policymaking institutions and considers the ways that government responds to the ideological economic and political interests of industry private advocacy groups and individuals Olufs discussed the recent trend toward deregulation and provides a full analysis of the Telecommunications Act of 1996 including the politics of its enactment and its long term implications for both industry and the daily lives of citizens

Telecommunications Policy-making in the European Union Joseph W. Goodman, 2006-01-01 This book offers a good study of the development of telecommunications policy by the EU Great value to those interested in understanding both European telecommunications policy and more generally in how policy making operates in the EU Mark Thatcher West European Politics the book provides an interesting perspective on the evolution of nature of telecommunications policy making within the EU As a consequence the book should be of interest to telecommunications and politics government researchers alike Jason Whalley Communications Booknotes Quarterly This well written book deals with the emergence and shaping of telecommunications policy in Europe with a particular focus on the time period of 1987 1998 This book fills an important gap reviewing the initial formative years of European telecommunications policy development and liberalization in detail The book captures the complicated and interdependent policy formation process in Europe in a credible and thoughtful way without falling into the trap of admiring critical personalities and key actors The author has written an important and useful book which invites the research community to further explore the evolution of European telecommunications policy Erik Bohlin Communications Strategies Examining the emergence of a European Union telecommunications policy Joseph Goodman explains how and why the policy developed as it did and why certain reforms in the sector were easier to achieve than others He provides a history of the key actors in the policy making process from the first attempts by the national postal telegraph and telecommunication administrations to coordinate their telecommunications policies in the 1950s to the implementation of a comprehensive EU telecommunications regulatory structure in 1998 and the development of a new regulatory structure in 2003 The analytical framework employed by the author draws upon new institutionalism and actor based approaches providing an opportunity to evaluate the utility of a synthetic approach for examining and explaining EU policy making The focus of his analysis is on the European Commission s two pronged strategy of liberalisation and harmonisation which began in the late 1980s and culminated in an important milestone on January 1st 1998 when the EU Member States fully opened their telecommunications markets to competition He concludes that a synthetic approach which enables the researcher to apply a number of approaches to multiple settings and various levels of analysis is useful even

Telecommunications Policy Act United States. Congress. House. Committee on Energy and Commerce. Subcommittee on Telecommunications and Finance, 1990 **The Legitimacy and Responsiveness of Industry Rule-making** Karen Lee, 2018-09-06 Rule making is no longer an activity undertaken exclusively by public actors Private actors are increasingly allowed by legislatures and regulatory bodies to take part in and in some cases assume responsibility for the formation of

legally binding rules for example in the US UK Australia and the EU Departing from traditional forms of rule making by involving private actors may enhance the ability of regulatory systems to achieve social goals as regulatory scholars argue However because private actors are permitted to act in their own best interests their involvement also raises doubts about the legitimacy of the underlying rule making processes and the rules that are formulated The principal aim of this book is to highlight that the tension between the responsiveness that leading international regulatory scholars advocate in order to improve regulatory effectiveness and the law and its formal substantive procedural and institutional values is not as great as may first appear Drawing on three in depth case studies of the experience of the Australian telecommunications industry with self regulatory rule making a form of rule making that bears the hallmarks of responsive regulation democratic experimentalism smart regulation and other strategies of proceduralization it is argued that industry rule making can as a matter of practice be responsive and legitimate at the same time In doing so the book formulates and applies criteria against which industry rule making should be evaluated and identifies a number of indicia that point to when industry rule making is likely to be simultaneously legitimate and responsive
