

THE ART AND DESIGN OF THE MACHINE AGE

By Alan Trachtenberg

WHILE MUCH of Europe was in disorder at the end of the Great War in 1918, the United States was entering a period of extravagant development of the mass-made consumer magazine, skyscraper, automobile, and records of height, light, and speed. Europe was shaping new urban landscapes.

Streamlined locomotives appeared, as well as airplanes and automobiles, concrete highways, airports and service stations — all bringing waves of modernity into rural and urban worlds, to the more remote sections, great dams and their lakes, harbors represented the transforming force of electricity.

These new mechanical forms and forces offered themselves as inspiring symbols of unprecedented human well-being, signaling a new epoch in communication, transportation and the mass production of consumer goods. It was not unusual, especially during the 1920's, for intellectuals and artists to speak of the machine as a religious force, a "new deity."

Many Europeans shared this view. "The world before us conjures up ideas of something skyscraper, rational, industrial, universal," wrote El Lissitzky.

Alan Trachtenberg is chairman of the American studies program at Yale University.

And, the Russian constructivist painter, in 1922. The French sociologist Andre Siegfried observed in a highly popular book of 1927, "America Comes of Age": "The American people are now creating on a vast scale an entirely original social structure which bears only a superficial resemblance to the European. It may even be a new age."

By 1927, it was widely agreed that the name of the age could only be the "Machine Age." In that year, a category by that name appeared for the first time in The New York Times Index. That same year — a year of revolution, ominous signal of what lay ahead — Charles Sheeler, a photographer, received his first commission from the newly image-conscious Ford Motor Company to photograph its River Rouge plant to promote the Model A against its competitors' introduction of annual model changes. At about the same time that serious artists were discovering in the industrial landscape new religious symbols, businessmen were learning about the power of advertising. To start off the period of overproduction, their advertising agencies turned to Machine Age imagery to stimulate consumption. Color became widespread in printed advertisements. And H. L. Hunt, an oilman, the inventor of the American oil pumpjack, created his famous Dynamite Series.

We see now that "Machine Age" served the period as a symbolic concept — simply defined, to be sure, by the advertising industry. The idea of the Machine Age helped the nation understand and organize its rush from a predominantly rural, Protestant society to an urban, modern world of automobiles, radios and electric

appliances. Hard one of the earliest conceptions of the era, the concept provided a lens through which the society focused its self-image.

As is demonstrated by the richly documented exhibition "The Machine Age in America 1880-1915," opening Oct. 17 at the Brooklyn Museum. As well as by the accompanying book published by Harry N. Abrams, the Machine Age represents a distinctive period in art and

SOME DESIGNING typical of the age are Walter Dorville Swanger's "Blindfold" route (left), Gerald Murphy's painting of a work yard, and the entrance of the McGraw-Hill Building (right) in New York, by Raymond Hood and E. Andrew Foxworth. Opposite page: The rail and Flexlight west of Detroit, Mich.

Arabic Type-Making in the Machine Age Titus Nemeth, 2017-07-20 Arabic is the third most widely used script in the world and gave rise to one of the richest manuscript cultures of mankind Its representation in type has engaged printers engineers businesses and designers since the 16th century and today most digital devices render Arabic type Yet the evolution of the printed form of Arabic and its development from metal to pixels has not been charted before Arabic Type Making in the Machine Age provides the first comprehensive account of this history using previously undocumented archival sources In this richly illustrated volume Titus Nemeth narrates the evolution of Arabic type under the influence of changing technologies from the perspective of a practitioner combining historical research with applied design considerations

Making Arms in the Machine Age: Philadelphia's Frankford Arsenal, 1816-1870 , **Making Arms in the Machine Age** James J. Farley, 1994 Making Arms in the Machine Age traces the growth and development of the United States Arsenal at Frankford Pennsylvania from its origin in 1816 to 1870 During this period the arsenal evolved from a small post where skilled workers hand produced small arms ammunition to a full scale industrial complex employing a large civilian workforce James Farley uses the history of the arsenal to examine larger issues including the changing technology of early nineteenth century warfare the impact of new technology on the United States Army and the reactions of workers and their families and communities to the coming of industrialization Shortly after the War of 1812 the U S Army founded several new arsenals including Frankford to build up supplies of arms and ammunition then in short supply At that time the Army was held in low regard because of its perceived poor performance in the war so the arrival of arsenals was not welcomed By 1870 however the arsenal at Frankford had integrated itself into the community and become a valued and respected member of it Farley argues that the Ordnance Department of the U S Army created an industrial system of manufacture at Frankford well in advance of private industry He also contends that the evolution of the Army into an employer of a large scale civilian workforce helped to end the isolation and anti militarism that plagued it after the War of 1812 Farley s study joins recent work in the history of technology such as Judith McGaw s That Wonderful Machine that seeks to understand technological change in its social and cultural context **HBR's 10 Must Reads on AI, Analytics, and the New Machine Age (with bonus article "Why Every Company Needs an Augmented Reality Strategy" by Michael E.
