McConnell, 2020-02-26 *Management Principles for Health Professionals* is a practical guide for new or future practicing healthcare managers. The customary activities of the manager: planning, organizing, decision making, staffing, motivating, and budgeting, are succinctly defined, explained, and presented with detailed examples drawn from a variety of health care settings. Students will learn proven management concepts, techniques, models, and tools for managing individuals or teams with skill and ease. The Eighth Edition continues to present foundational principles of management in the context of contemporary health care. With timely coverage of such topics as medical cost sharing, use of robots, ER by appointment, increased use of observation units, renewed use of flextime staffing and scheduling, use of social media on the job, and more, this thoroughly updated text addresses the latest trends and issues that today's health care manager is likely to encounter.

Essentials of Management for Healthcare Professionals Hari Singh, 2017-12-15 Medical care is an industry and private providers and hospitals are the major service providers. They operate on business principles. Hospitals are getting highly specialized and complex. The diagnostics and therapeutics are technology intensive. Private establishments have to compete with one another to remain in business. They strive to induct the best talent and latest technical know-how, resulting in ever-increasing costs to patients. Patients who pay high charges demand quality as a matter of right. To meet the challenge, hospitals are constrained to bring in professionalism in their systems and services. They appoint qualified professional managers to manage their clinics and hospitals with a view to sparing health professionals to focus on clinical care. Whether right or wrong, management is often associated with authority and power. As a result, the medical professionals are reduced to a secondary level in some organizations. To retain commanding positions in medical organizations, it has become necessary for the healthcare professionals to learn management at least its basics. On the other hand, non-medical managers, while managing healthcare services, do not get the required cooperation from the medical professionals as the latter are often secretive and not willing to share medical knowledge. If medical knowledge is demystified, non-medical managers can perform many functions in healthcare organizations proficiently. Both medical and non-medical managers can complement each other in providing quality healthcare services. The book aims to orient clinicians, including physicians and nurses, and other healthcare professionals on the essentials of business management and to familiarize them with management terms and jargon. They can learn to be effective managers besides being health professionals. Similarly, non-medical managers can get familiarized to nuances of

clinical care and special managerial requirements of healthcare facilities They all will be able to relate processes in healthcare settings with the concepts of business management They can develop expertise on patient relationship management
