Entry barriers into the European Civil Aviation markets Mirko Schnell, 1999-02-15 Inhaltsangabe Abstract The contestability hypothesis has extensively been tested for the liberalised US airline markets Entry barriers render US airline markets non contestable However these studies do not allow an empirically based conclusion whether entry barriers are differently effective in preventing entry Moreover since previous studies exhibit no intra firm perspective they cannot ascertain whether a particular entry impediment prevents entry equally effective irrespective of potential entrant s characteristics Comparable studies about the recently liberalised European airline markets are not available This study fills these gaps by investigating European airline managers perception of entry barriers It turn out that some barriers are perceived to be significantly more effective than others The perception of the effectiveness of a certain entry barrier however varies considerably among airline managers Airlines and respondents characteristics contribute to explain this variance
