Nesbitt, 2018-04-05 A comprehensive introduction to the current technology and application of radar in meteorology and atmospheric sciences Written by leading experts in the field Radar Meteorology A first Course offers an introduction to meteorological radar systems and applications with emphasis on observation and interpretation of physical processes in clouds and weather systems This comprehensive introduction to the subject offers an overview of the quantities essential to radar meteorology including the radar reflectivity factor and Doppler dual polarization and multi wavelength radar variables The authors highlight wind retrieval from single and multiple Doppler radars precipitation estimation and hydrometeorological applications with chapters dedicated to interpretation of radar data from warm season mid latitude severe weather winter storms tropical cyclones and more In addition Radar Meteorology highlights research applications of this burgeoning technology exploring dynamic applications such as space borne and ground based vertically pointing radar systems and cloud airborne and mobile radars As meteorological radars are increasingly used professionally for weather observation forecasting and warning this much needed text Presents an introduction to the technical aspects and current application of radar as used in the meteorology and atmospheric sciences Contains full colour illustrations that enhance the understanding of the material presented Examines the wide range of meteorological applications of radar Includes problems at the end of each chapter as a helpful review of the contents Provides full instructor support with all illustrations and answers to problems available via the book s instructor website Radar Meteorology offers a much needed introductory text to the study of radar as applied to meteorology The text was designed for a one semester course based on the authors own course in Radar Meteorology at the University of Illinois at Urbana Champaign

**Radar Systems Analysis and Design Using MATLAB** Bassem R. Mahafza, 2022-03-28 The first edition of this ground breaking and widely used book introduced a comprehensive textbook on radar systems analysis and design providing hands on experience facilitated by its companion MATLAB software The book very quickly turned into a bestseller Based on feedback provided by several users and drawing from the author s own teaching experience the 4th edition adopts a new approach The presentation in this edition takes the reader on a scientific journey whose major landmarks comprise the different radar sub systems and components Along the way the different relevant radar subsystems are analyzed and discussed in great level of detail Understanding the radar signal types and their associated radar signal processing techniques are key to understating how radar systems function

Each chapter provides the necessary mathematical and analytical coverage required for a sound understanding of radar theory. Additionally, dedicated MATLAB functions programs enhance the understanding of the theory and establish a means to perform radar system analysis and design trades. The software provides users with numerous varieties of graphical outputs. Additionally, a complete set of MATLAB code that generates all plots and graphs found within the pages of this textbook are also available. All companion MATLAB code can be downloaded from the book's web page. The 4th Edition Takes advantage of the new features offered by MATLAB 2021 release. Brings the text to a current state of the art. Incorporates much of the feedback received from users using this book as a text and from practicing engineers accordingly several chapters have been rewritten. Presents unique topics not found in other books. Maintains a comprehensive and exhaustive presentation. Restructures the presentation to be more convenient for course use. Provides a post course reference for engineering students as they enter the field. Offers a companion solutions manual for instructors. The 4th edition will serve as a valuable tool to students and radar engineers by helping them better analyze and understand the many topics of radar systems. This book is written primarily as a graduate level textbook although parts of it can be used as a senior level course. A companion solutions manual has been developed for use by instructors.

**Essential Boat Electrics** Oliver Ballam, Pat Manley, 2021-11-05

Electricity is vital on board most boats to keep their systems running and to provide the crew with the services they expect. Much of it will be professionally fitted and many yachtsmen will have little knowledge about the finer detail of electric circuits. But given the importance of electrical power some understanding of it is likely to be useful either to use when required away from the marina or to repair and upgrade your systems. This book is written to provide that understanding and to allow you to undertake electrical jobs on board yourself properly and safely. It removes the mystique of boat electrics and gives you the confidence to tackle the jobs when you need to. Included are the minimum formulae and theory required focussing more on the practical using simple language and clear illustrations. There are tutorials from using a multimeter and wiring a circuit to troubleshooting electrical faults all using easy to follow photo sequences. The book also looks at tasks such as choosing solar panels and batteries and connecting navigational instruments. The book is a great manual for a yachtman needing to keep the power flowing. It has been thoroughly modernised and updated for this new edition by boating electric wizard Oliver.
