The Practical Real-Time Enterprise Bernd Kuglin, Heinz Thielmann, 2005-08-15 Speed as a factor for success Our modern industrial society lives life in the fast lane The catchwords faster shorter more powerful reflect what we experience in almost all aspects of our lives Whether at home or at work we are constantly on the move and in a rush In our private lives we find rapid exchange of information most entertaining and we are fascinated by the wide range of information that pours in on us from all around the world mainly via the new media It gives us the feeling of being a part of the action everywhere and all the time Seldom are we aware that the only reason this flood of information often referred to as overstimulation does not lead to overkill is that we manage to organize our time effectively There are many parallels to this in the business world Here too a great deal of time pressure is exerted from outside goals are set ever higher and deadlines become tighter In other words demands on our time demand faster reaction Crucial information travels around the globe across all time zones in a matter of seconds In fact instead of CET or CEST it would make sense to have a single time zone for the worldwide network called GST for Global Simultaneous Time In business more so than in private life we are almost constantly online

The Concept of a Real-Time Enterprise in Manufacturing Daniel Metz, 2013-10-01 Enterprises have to react instantly to changing market conditions and disturbances that occur during execution of value creation processes Depending upon the processes context the goal is to significantly reduce lead times reaction times and time to market among others The vision of a real time enterprise RTE which is able to sense and analyze events from internal and external sources and perform adequate reactions has been envisaged by manufacturing enterprises Daniel Metz presents a framework based on EDA and CEP towards the realization of RTE in manufacturing The framework closes the vertical integration gap and further establishes feedback in near real time among enterprise levels As such the framework provides a holistic and closed loop control of manufacturing processes and encompasses results and insights from management engineering and computer science The framework has been implemented for a small and medium sized foundry in Germany The developed control approach has led to a significant increase in manufacturing processes efficiency i.e. performance quality and availability
