Recasting Egalitarianism New Rules For Communities States And Markets:

Recasting Egalitarianism Samuel Bowles, Herbert Gintis, Harry Brighouse, 1998 Addresses the challenges posed by a globally integrated economy and the economic roles played by information and motivation The text argues for an egalitarian redistribution of assets land capital and housing and the beneficial disciplining effects of competition **Healthy, Wealthy, and Fair** James A. Morone, Lawrence R. Jacobs, 2005-03-10 Health policy experts chart the stark disparities in health wealth in the United States The authors explain how the inequities arise why they persist what makes them worse **Citizen's Income and Welfare Regimes in Latin America** Rubén Lo Vuolo, 2012-12-28 Social protection systems in Latin America developed in a fragmented manner offering varying access to benefits and benefit levels to population groups In the context of widespread informal and precarious work social insurance institutions could only provide limited coverage In this context progress toward a Citizen's Income policy in Latin America depends on the possibility of reappraising its importance for an integrated institutional system which promotes the empowerment and economic independence of people A Citizen's Income policy is not only a cash transfer to alleviate poverty or a basic income for food It is a basic right to improve democracy and encourage a more autonomous development of people living in profoundly unequal societies **The Wealth of Freedom** Stuart White, 2025-05-18 What is an economy for The republican tradition in political thought offers a compelling way of exploring this question The economy is for the common good and the people as the sovereign properly have democratic authority to design it to satisfy their common good Recent republican philosophers emphasize the centrality of freedom to the common good where freedom is non domination the status of not being subject to another's uncontrolled power of interference But insight into the common good can also be found in other sources including liberal egalitarian theories of social justice The common good provides a standard to evaluate existing institutions and to propose alternatives that starting in our present context look likely to make society more just In this way it helps to guide the collective political action of republican struggle The Wealth of Freedom argues for universal basic income and universal capital grants the fair taxation of inheritances and wealth participatory democracy in the workplace in investment and in the design of public services and for strong trade unions as key elements in a radical republican economy of the common good Internationally a radical republican economy of the common good calls for us to restructure existing systems of transnational governance and to support a major investment programme to address the climate emergency in a fair reparative way Focusing on demands for a Green New Deal Stuart White shows how the book's institutional proposals may help to develop this agenda The struggle for such a programme is the terrain on which we must now assert creative popular sovereignty over the economy to ensure that it does work for the common good *Social Justice and Educational Measurement* Zachary Stein, 2016-03-31 Social Justice and Educational Measurement addresses foundational concerns at the interface of standardized testing and social justice in American schools Following John Rawls's philosophical methods Stein builds and justifies an ethical framework for guiding

practices involving educational measurement This framework demonstrates that educational measurement can both inhibit and ensure just educational arrangements It also clarifies a principled distinction between efficiency oriented testing and justice oriented testing Through analysis of several historical case studies that exemplify ethical issues related to testing this book explores and propounds speculative design principles and arguments in favour of radically democratic school reforms which address how the future of testing might be shaped to ensure justice for all These case studies cover the widespread use of IQ style testing in schools during the early decades of the 20th century the founding of the Educational Testing Service and the recent history of test based accountability associated with No Child Left Behind Social Justice and Educational Measurement will be essential reading for academics researchers and postgraduate students in education testing and assessment and the philosophy of education It will also be of interest to policymakers and educational administrators

After the Fall George Katsiaficas,2001-05-10 Did the U S really win the Cold War Is the fall of Communism only a temporary setback for Marxism or has the freemarket prevailed once and for all In this work the last ten years are examined by the most important Marxist scholars and journalists *The Ethics of Stakeholding* K. historical development of the discipline followed by in depth analyses of four ideological perspectives in political economy Classical Liberalism Radicalism Conservatism and Modern Liberalism The author then applies each of the four ideological perspectives to a range of contemporary issues such as the role of government economic instability poverty labor relations discrimination education culture the environment and international trade Readers will gain insight into the methods and practice of political economics as well as better understand the history of political economic thought and the effects of historical processes European industrialization for example on modern debates **Ten Essays for a 21st Century**

Social Justice and Individual Ethics in an Open Society Frank Vandebroucke, 2012-12-06 Can the need for incentives justify inequality Starting from this question Frank Vandebroucke examines a conception of justice in which both equality and responsibility are involved In the first part of the inquiry which explores the implementation of that conception of justice the justification of incentives assumes that agents make personal choices based only upon their own interests The second part of the book challenges the idea that a normative conception of distributive justice can be based on that traditional assumption i e that personal choices are not the subject matter of justice Thus Vandebroucke questions the Rawlsian idea that the primary subject of a theory of justice is the basic structure of society and not the individual conduct of its citizens For a society to be really just the ethos of individual conduct has to serve justice Non mathematical readers can skip the formal model proposed in Chapter 3 and understand the rest of the book [International Intervention in the Post-Cold War World](#) Michael C. Davis, Wolfgang Dietrich, Bettina Scholdan, 2017-07-28 International intervention on humanitarian grounds has been a contentious issue for decades First it pits the principle of state sovereignty against claims of universal human rights Second the motivations of intervening states may be open to question when avowals of moral action are arguably the fig leaf covering an assertion of power for political advantage These questions have been salient in the context of the Balkan and African wars and U S policy in the Middle East This volume undertakes a serious systematic and broadly international review of the issues **Urban Competitiveness** Iain Begg, 2002-02-27 The factors that make some cities more successful has become an increasingly important policy issue This book is the first to explore facets of competitiveness in a systematic way that combines theory evidence and policy implications Bringing together experts on urban economic performance it provides a new look at urban competitiveness [Economic Growth and the High Wage Economy](#) Morris Altman, 2013-06-26 This book provides a theoretical framework to better understand how firms economies and labor markets have evolved This is done in a reader friendly fashion without complex mathematical arguments and proofs Economic Growth and the High Wage Economy shows how high wage economies help make firms and economies more productive and why high wage economies can be competitive even in an increasingly globalized environment It also demonstrates why concerns that labor supply will dry up as wages increase and social benefits rise are largely based on impoverished economic reasoning The first chapters provide a theoretical basis for the rest of the book showing for instance

how higher wages are prone to increasing the level of economic efficiency by getting people to work harder and smarter mainly smarter Altman also explains that our understanding of technological change can be markedly improved by modelling technological change as a product of higher wages and improved working conditions and other shocks to the economic system As the book develops it is shown that increasing and high levels of income inequality are not necessary for growth and development because the economic pie grows when the economic wellbeing of the lower half and even the middle improves The evolution of the state can also be better understood by applying this analytical framework So too can the persistence of inefficient systems of production and cultural traits that appear to be inconsistent with economic prosperity On top of this the book examines the implications of Altman's theoretical framework for macroeconomic analysis and policy Finally it is shown that labor supply can be better understood by introducing target income into the analytical mix The main contribution of this book is providing the theoretical underpinning for why relatively high wages and moreover competition with high wages is good for dynamic growth and development This work establishes why an alternative model of labor supply based on the notion and reality of target income does a better job of explaining the evolution of labor supply The latter also reinforces the view that increasing wage and workers benefits should not be expected to damage the economy even in the realm of labor supply This book will be of interest to public policy experts trade unions human rights experts and scholars of behavioural economics labour economics and globalization

Environment, Inequality and Collective Action Marcello Basili, Maurizio Franzini, Alessandro Vercelli, 2006 The Siena Summer School hosts lectures by distinguished scholars and offers a clear account of alternative research paths This latest addition to the series identifies and addresses key issues surrounding the inequality environment relationship

Smart Economic Decision-Making in a Complex World Morris Altman, 2020-05-22 Smart Economic Decision Making in a Complex World is a fresh and reality based perspective on decision making with significant implications for analysis self understanding and policy The book examines the conditions under which smart people generate outcomes that improve their place of work their household and society Within this work the curious reader will find interesting open questions on many fascinating areas of current economic debate including the role of realistic assumptions robust model building understanding how and when non neoclassical behavior is best practice why the assumption of smart decision makers is best to understand and explain our economies and societies and under what conditions individuals can make the best possible choices for themselves and society at large Additional sections cover when and how efficiency is achieved why inefficiencies can persist when and how consumer welfare is maximized and what benchmarks should be used to determine efficiency and rationality Makes the case for smart and rational decision making as a context dependent rational process that is framed by socio cultural environment and conditioned by institutional capacities Explains how incorporation of the smart decision maker concept into economic thought improves our understanding of how why and when people generate certain outcomes Explores how economic efficiency can be achieved individual preferences

realized and social welfare maximized through the use of smart and rational approaches **Gender Equality** Janet C. Gornick, Marcia K. Meyers, 2020-05-05 In the labor market and workplace anti discrimination rules affirmative action policies and pay equity procedures exercise a direct effect on gender relations But what can be done to influence the ways that men and women allocate tasks and responsibilities at home In Gender Equality Volume VI in the Real Utopias series social scientists Janet C Gornick and Marcia K Meyers propose a set of policies paid family leave provisions working time regulations and early childhood education and care designed to foster more egalitarian family divisions of labor by strengthening men s ties at home and women s attachment to paid work Their policy proposal is followed by a series of commentaries both critical and supportive from a group of distinguished scholars and a concluding essay in which Gornick and Meyers respond to a debate that is a timely and valuable contribution to egalitarian politics
