Recent Advances in Fourier Analysis and Its Applications J.S. Byrnes, 2012-12-06 This volume contains papers presented at the July 1989 NATO Advanced Study Institute on Fourier Analysis and its Applications The conference held at the beautiful Il Ciocco resort near Lucca in the glorious Tuscany region of northern Italy created a dynamic in interaction between world renowned scientists working in the usually disparate communities of pure and applied Fourier analysts The papers to be found herein include important new results in x ray crystallography by Nobel Laureate Herbert Hauptman the application of the new concept of bispectrum to system identification by renowned probabilist Athanasios Papoulis fascinating applications of number theory in Fourier analysis by eminent electrical engineer Manfred R Schroeder and exciting concepts regarding polynomials with restricted coefficients by foremost mathematical problem solver Donald J Newman The remaining papers further illustrate the inherent power and beauty of classical Fourier analysis whether the results presented were sought as an end in themselves or whether these classical methods were employed as a tool in illustrating and solving a particular applied problem From antenna design to concert hall acoustics to image and speech processing to unimodular polynomials each conference participant benefited significantly from his or her exposure in many cases for the first time to those scientists on the other end of the spectrum from themselves The purpose of this volume is to pass those benefits on to the reader

Harmonic Analysis and Applications Christopher Heil, 2007-08-02 This volume is dedicated to John Benedetto It seems just yesterday that we celebrated his 60th birthday in a memorable conference in College Park Yet that was October of 1999 and already more than six years have passed But John is still too young to be fully honored by a single foreword or even a single volume that attempts to summarize the impact of his work on harmonic analysis his students and his coworkers Given his continuing high and even increasing level of activities his list of lifetime achievements is surely far from complete Even so we will make an attempt in this foreword to take a look back to see the major lines of his work and activities during the past 40 years of his life as a scientist and to learn from his biography and bibliography how the field of harmonic analysis has changed over the years and in particular to see the vibrant role that John has taken in this process John's first paper appeared in 1965 when he was 25 years old and his first book the Springer Lecture Notes on Harmonic Analysis on Totally D connected Sets when he was 31 By that time he had already published on the subjects of Tauberian algebras in the theory of generalized functions and on questions related to spectral synthesis His work on this latter topic continued through the 1970s culminating in the insightful volume Spectral Synthesis 1975 Only a year later his text Real Variables and Integration with Historical Notes appeared

Proceedings of the Norbert Wiener Centenary Congress, 1994 Vidyadhar Mandrekar, Pesi Rustom Masani, 1997-01-01 A mathematician on par with the greatest in the century Norbert Wiener was a universal thinker of colossal proportions This book contains the proceedings of the Norbert Wiener Centenary Congress held at Michigan State University on November 27 December 2 1994 The aim of the Congress was to reveal the depth and strong

coherence of thought that runs through Wiener's legacy and to exhibit its continuation in on going research This volume brings together the great minds who have furthered Wiener's ideas in physics stochastics harmonic analysis philosophy prosthesis and cybernetics The presentations coherently lay out the developments of the subjects from their inception This volume provides an excellent pathway for new investigators who may wish to pursue these developments by following the footsteps of world experts There is no other book available in which experts in the various fields in which Wiener worked have presented his thoughts and contributions in such a coherent and lucid manner

Progress in Wavelet Analysis and Applications Yves Meyer, Sylvie Roques, 1993 *Adaptive High-Resolution Sensor Waveform Design for Tracking* Ioannis Kyriakides, Darryl Morrell, Antonia Papandreou-Suppappola, 2022-05-31 Recent innovations in modern radar for designing transmitted waveforms coupled with new algorithms for adaptively selecting the waveform parameters at each time step have resulted in improvements in tracking performance Of particular interest are waveforms that can be mathematically designed to have reduced ambiguity function sidelobes as their use can lead to an increase in the target state estimation accuracy Moreover adaptively positioning the sidelobes can reveal weak target returns by reducing interference from stronger targets The manuscript provides an overview of recent advances in the design of multicarrier phase coded waveforms based on Bjorck constant amplitude zero autocorrelation CAZAC sequences for use in an adaptive waveform selection scheme for multiple target tracking The adaptive waveform design is formulated using sequential Monte Carlo techniques that need to be matched to the high resolution measurements The work will be of interest to both practitioners and researchers in radar as well as to researchers in other applications where high resolution measurements can have significant benefits Table of Contents Introduction Radar Waveform Design Target Tracking with a Particle Filter Single Target tracking with LFM and CAZAC Sequences Multiple Target Tracking Conclusions
