## **Recent Developments In Mucosal Immunology:**

### **Recent Developments in Mucosal Immunology** Jiri Mestecky, 1987-10-31      **Recent Advances in Oral Immunity**

Avi-Hai Hovav, Asaf Wilensky, Jean-Pierre Allam, 2021-08-03 The oral mucosa is a challenging environment from an immunological perspective containing discrete niches with a unique architecture and function that requires precise adjustment of the immune system. Being the port of entry to the gastrointestinal and respiratory tracts, the oral cavity is also constantly challenged by antigens derived from air and food. Moreover, the oral cavity is the sole tissue of the body harboring a hard surface, i.e., the tooth, that is exposed to the hostile external environment, resulting in the formation of a complex biofilm that has local and systemic effects. To deal with such challenges, the oral immune system aims to prevent the invasion of pathogens, harmful antigens, and to tolerate non-pathogenic counterparts in order to maintain homeostasis. In recent years, numerous studies have addressed these fundamental issues, revealing sophisticated mechanisms engaged by the immune system to maintain oral mucosal homeostasis and to combat various immunological insults. Some of these studies have identified novel immunological mechanisms, emphasizing the uniqueness of the oral immune system and the necessity to further investigate its functions.

**Recent Advances in Mucosal Immunology** Jiri Mestecky, Jerry R. McGhee, John Bienenstock, Pearay L. Ogra, 2012-12-06 Increasing interest in the immunology of mucosal surfaces is obvious from the number of publications in scientific journals and from the frequency of national and international symposia devoted to this subject. Particularly encouraging are the large numbers of young investigators who have chosen to work in this area of theoretical immunology with profound practical implications. The two volumes represented here are the result of an International Congress of Mucosal Immunology held at the Niagara Falls Convention Center and the Niagara Falls Hilton on June 29-July 3, 1986. This satellite meeting of the International Congress of Immunology placed emphasis on all aspects of the Mucosal Immune System. This included the regulation of differentiation of mucosal lymphocytes, mucosa-associated lymphoreticular tissue, and lymphocyte homing; the immunology of mucosa-associated tissues and glands; effector functions in mucosal immunity; and the effects of environmental antigens on the immune response, all of which are included in Volume I. The second volume has emphasized studies of the immune response and effector functions: IgA biosynthesis and transport; IgA proteases and effector functions; developmental aspects; and immunodeficiency, the immunopathology of IgA, and mucosal immunoprophylaxis. A total of 218 papers are included in these two volumes, and a comparison to past meetings held at four to five year intervals indicates the explosive growth of mucosal immunology.

### **Recent Developments in Infant Nutrition**

J.G. Bindels, A. Goedhart, H.K.A. Visser, 2012-12-06 After 17 years, the Nutricia Symposium returned to its home grounds in The Netherlands where the first five Symposia were held. The objective of the Symposium was to bring together a limited number of opinion leaders and key researchers in selected topics of infant nutrition to discuss the current state of the art based on original contributions and reviews. The discussion sessions after the papers were taped and edited and may

give additional information and views As a result of time constraints the discussions on a few papers had to be cut short or unfortunately could not take place at all Nevertheless we strongly recommend reading the discussion sections such as the panel discussion on the requirements for LCPUFA for term and or preterm infants During the preparation of the Symposium the sad news that Professor J H P Jonxis died prompted the organisers to dedicate one special lecture to the memory of the principal organiser of the first four Nutricia Symposia This lecture entitled What determines the production and composition of breast milk was given by Dr Kathleen Moti Acknowledgement should be made to the co organizers and co chairmen Professor Sir David HuH Professor Pieter Sauer and Dr Terence Stephenson for their contribution Finally without mentioning names the editors wish to thank a number of persons within the Nutricia organization without whom the Symposium and its Proceedings would not have been possible Recent Advances in Mucosal Immunity Warren
