   Recent Developments in Well-Posed Variational Problems Roberto Lucchetti,Julian Revalski,2013-03-09 This volume contains several surveys focused on the ideas of approximate solutions well posedness and stability of problems in scalar and vector optimization game theory and calculus of variations These concepts are of particular interest in many fields of mathematics The idea of stability goes back at least to J Hadamard who introduced it in the setting of differential equations the concept of well posedness for minimum problems is more recent the mid sixties and originates with A N Tykhonov It turns out that there are connections between the two properties in the sense that a well posed problem which at least in principle is easy to solve has a solution set that does not vary too much under perturbation of the data of the problem i e it is stable These themes have been studied in depth for minimum problems and now we have a general picture of the related phenomena in this case But of course the same concepts can be studied in other more complicated situations as e g vector optimization game theory and variational inequalities Let us mention that in several of these new areas there is not even a unique idea of what should be called approximate solution and the latter is at the basis of the definition of well posed problem   **Recent Developments in Well-Posed Variational Problems** Roberto Lucchetti,Julian Revalski,2013-01-11 This volume contains several surveys focused on the ideas of approximate solutions well posedness and stability of problems in scalar and vector optimization game theory and calculus of variations These concepts are of particular interest in many fields of mathematics The idea of stability goes back at least to J Hadamard who introduced it in the setting of differential equations the concept of well posedness for minimum problems is more recent the mid sixties and originates with A N Tykhonov It turns out that there are connections between the two properties in the sense that a well posed problem which at least in principle is easy to solve has a solution set that does not vary too much under perturbation of the data of the problem i e it is stable These themes have been studied in depth for minimum problems and now we have a general picture of the related phenomena in this case But of course the same concepts can be studied in other more complicated situations as e g vector optimization game theory and variational inequalities Let us mention that in several of these new areas there is not even a unique idea of what should be called approximate solution and the latter is at the basis of the definition of well posed problem   **Recent Developments in Vector Optimization** Qamrul Hasan Ansari,Jen-Chih Yao,2011-09-21 We always come cross several decision making problems in our daily life Such problems are always conflicting in which many different view points should be satisfied In politics business industrial systems management science networks etc one often encounters such kind of problems The most important and difficult part in such problems is the conflict between various objectives and goals In these problems one has to find the minimum or maximum for several objective functions Such problems are called vector optimization problems VOP multi criteria optimization problems or multi objective optimization problems This volume deals with several different topics aspects of vector optimization theory ranging from the very beginning to the most recent

Classical And Modern Optimization Guillaume Carlier,2022-03-16 The quest for the optimal is ubiquitous in nature and human behavior The field of mathematical optimization has a long history and remains active today particularly in the development of machine learning Classical and Modern Optimization presents a self contained overview of classical and modern ideas and methods in approaching optimization problems The approach is rich and flexible enough to address smooth and non smooth convex and non convex finite or infinite dimensional static or dynamic situations The first chapters of the book are devoted to the classical toolbox topology and functional analysis differential calculus convex analysis and necessary conditions for differentiable constrained optimization The remaining chapters are dedicated to more specialized topics and applications Valuable to a wide audience including students in mathematics engineers data scientists or economists Classical and Modern Optimization contains more than 200 exercises to assist with self study or for anyone teaching a third or fourth year optimization class Dynamics with Inequalities David E. Stewart,2011-01-01 This book addresses dynamics with inequalities comprehensively The author develops the theory and application of dynamical systems that incorporate some kind of hard inequality constraint such as mechanical systems with impact electrical circuits with diodes as diodes permit current flow in only one direction and social and economic systems that involve natural or imposed limits such as traffic flow which can never be negative or inventory which must be stored within a given facility This book demonstrates that hard limits eschewed in most dynamical models are natural models for many dynamic phenomena and there are ways of creating differential equations with hard constraints that provide accurate models of many physical biological and economic systems The author discusses how finite and infinite dimensional problems are treated in a unified way so the theory is applicable to both ordinary differential equations and partial differential equations *Approximation Of Set-valued Functions: Adaptation Of Classical Approximation Operators* Nira Dyn,Elza Farkhi,Alona Mokhov,2014-10-30 This book is aimed at the approximation of set valued functions with compact sets in an Euclidean space as values The interest in set valued functions is rather new Such functions arise in various modern areas such as control theory dynamical systems and optimization The authors motivation also comes from the newer field of geometric modeling in particular from the problem of reconstruction of 3D objects from 2D cross sections This is reflected in the focus of this book which is the approximation of set valued

functions with general not necessarily convex sets as values while previous results on this topic are mainly confined to the convex case The approach taken in this book is to adapt classical approximation operators and to provide error estimates in terms of the regularity properties of the approximated set valued functions Specialized results are given for functions with 1D sets as values   *Ill-posed Variational Problems and Regularization Techniques* Michel Thera,Rainer Tichatschke,2012-12-06 This book presents recent developments in the field of ill posed variational problems and variational inequalities covering a large range of theoretical numerical and practical aspects The main topics are Regularization techniques for equilibrium and fixed point problems variational inequalities and complementary problems Links between approximation penalization and regularization Bundle methods nonsmooth optimization and regularization Error Bounds for regularized optimization problems   *System Modeling and Optimization XX* E.W. Sachs,R. Tichatschke,2013-03-14 System Modeling and Optimization XX deals with new developments in the areas of optimization optimal control and system modeling The themes range across various areas of optimization continuous and discrete numerical and analytical finite and infinite dimensional deterministic and stochastic static and dynamic theory and applications foundations and case studies Besides some classical topics modern areas are also presented in the contributions including robust optimization filter methods optimization of power networks data mining and risk control This volume contains invited and selected papers from presentations at the 20th IFIP TC7 Conference on System Modeling and Optimization which took place at the University of Trier Germany from July 23 to 27 2001 and which was sponsored by the International Federation for Information Processing IFIP   Mathematical Reviews ,2004   Unbounded Functionals in the Calculus of Variations Luciano Carbone,Riccardo De Arcangelis,2019-06-13 Over the last few decades research in elastic plastic torsion theory electrostatic screening and rubber like nonlinear elastomers has pointed the way to some interesting new classes of minimum problems for energy functionals of the calculus of variations This advanced level monograph addresses these issues by developing the framework of a gener
