Selected Papers on Calculus Tom M. Apostol, 1969 Selected Papers on Calculus American Mathematical Society, 1969 **Selected Papers on Calculus**, 1969 **A Century of Calculus: 1969-1991** Tom M. Apostol, 1992
Selected papers reprinted from American mathematical monthly Volumes 1 75 and Mathematics magazine Volumes 1 40
Selected Papers on Calculus. Reprinted from the American Mathematical Monthly (volumes 1-75) and from the Mathematics Magazine Tom M. Apostol, Hubert E. Chrestenson, C. Stanley Ogilvy, Donald E. James Schoonmaker, 1969 *Selected Papers on Calculus* American Mathematical Monthly, 1969 *Selected Papers on Calculus ; Reprinted from the American Mathematical Monthly Vol. 1-75 and from the Mathematics Magazine* Tom M. Apostol, 1969
Selected papers on calculus Tom M. et al Apostol, 1968 Selected Papers on Automath R.P. Nederpelt, J.H. Geuvers, R.C. de Vrijer, 1994-10-20 The present volume contains a considered choice of the existing literature on Automath Many of the papers included in the book have been published in journals or conference proceedings but a number have only circulated as research reports or have remained unpublished The aim of the editors is to present a representative selection of existing articles and reports and of material contained in dissertations giving a compact and more or less complete overview of the work that has been done in the Automath research field from the beginning to the present day Six different areas have been distinguished which correspond to Parts A to F of the book These areas range from general ideas and motivation to detailed syntactical investigations **Selected Papers in Logic and Foundations, Didactics, Economics** Karl Menger, 2012-12-06 This volume brings together those papers of mine which may be of interest not only to various specialists but also to philosophers Many of my writings in mathematics were motivated by epistemological considerations some papers originated in the critique of certain views that at one time dominated the discussions of the Vienna Circle others grew out of problems in teaching fundamental ideas of mathematics still others were occasioned by personal relations with economists Hence a wide range of subjects will be discussed epistemology logic basic concepts of pure and applied mathematics philosophical ideas resulting from geometric studies mathematical didactics and finally economics The papers also span a period of more than fifty years What unifies the various parts of the book is the spirit of searching for the clarification of basic concepts and methods and of articulating hidden ideas and tacit procedures Part 1 includes papers published about 1930 which expound an idea that Carnap after a short period of opposition in the Circle fully adopted and under the name Principle of Tolerance he eloquently formulated it in great generality in his book *Logical Syntax of Language* 1934 through which it was widely disseminated The New Logic in Chapter 1 furthermore includes the first report 1932 to a larger public of Gödel's epochal discovery presented among the great logic results of all time Chapter 2 is a translation of an often quoted 1930 paper presenting a detailed exposition and critique of intuitionism **Selected Papers on Calculus** American Mathematical Monthly Mathematics Magazine Mathematical Association of America, 1969 **Selected Papers** Marston

Morse, 1981-05-04 From the Introduction Marston Morse was born in 1892 so that he was 33 years old when in 1925 his paper Relations between the critical points of a real valued function of n independent variables appeared in the Transactions of the American Mathematical Society Thus Morse grew to maturity just at the time when the subject of Analysis Situs was being shaped by such masters as Poincaré, Veblen, L. E. J. Brouwer, G. D. Birkhoff, Lefschetz and Alexander and it was Morse's genius and destiny to discover one of the most beautiful and far reaching relations between this fledgling and Analysis a relation which is now known as Morse Theory In retrospect all great ideas take on a certain simplicity and inevitability partly because they shape the whole subsequent development of the subject And so to us today Morse Theory seems natural and inevitable This whole flight of ideas was of course acclaimed by the mathematical World it eventually earned him practically every honor of the mathematical community over twenty honorary degrees the National Science Medal the Legion of Honor of France Selected Papers ...: Theory of electric circuit , 1929 **Selected Papers of John H Holland** Jan Wouter

Vasbinder, Helena Hong Gao, 2017-11-24 With his work on computer logic John H Holland became one of the most important founders of modern computer science People who knew John H Holland were all amazed and deeply influenced by his incredibly imaginative and creative mind He produced many more ideas than he could follow up in his life time This selection of his papers in the field of computer logic entails many of his explored and unexplored ideas Revisiting the explored ideas and exploring the unexplored ones should be of great interest to scientists of all ages and of great value to the current research not only in computer science but in many other fields as well Selected Papers of Norman Levinson J.A.

Nohel, D.H. Sattinger, Gian-Carlo Rota, 1997-12-18 The deep and original ideas of Norman Levinson have had a lasting impact on fields as diverse as differential integral equations harmonic complex stochastic analysis and analytic number theory during more than half a century Yet the extent of his contributions has not always been fully recognized in the mathematics community For example the horseshoe mapping constructed by Stephen Smale in 1960 played a central role in the development of the modern theory of dynamical systems and chaos The horseshoe map was directly stimulated by Levinson's research on forced periodic oscillations of the Van der Pol oscillator and specifically by his seminal work initiated by Cartwright and Littlewood In other topics Levinson provided the foundation for a rigorous theory of singularly perturbed differential equations He also made fundamental contributions to inverse scattering theory by showing the connection between scattering data and spectral data thus relating the famous Gel'fand Levitan method to the inverse scattering problem for the Schrödinger equation He was the first to analyze and make explicit use of wave functions now widely known as the Jost functions Near the end of his life Levinson returned to research in analytic number theory and made profound progress on the resolution of the Riemann Hypothesis Levinson's papers are typically tightly crafted and masterpieces of brevity and clarity It is our hope that the publication of these selected papers will bring his mathematical ideas to the attention of the larger mathematical community Selected Papers on Analysis and Related Topics , 2008 This volume contains translations

of papers that originally appeared in the Japanese journal Sugaku The papers range over a variety of topics including operator algebras analysis and statistics
