Ter Haar, 2013-09-03 Lectures on Selected Topics in Statistical Mechanics is a collection of lectures given at the 1971 Simla Summer School of Statistical Mechanics held in India The lectures explore a wide range of topics related to statistical mechanics including occupation number representation the Green function method the pair Hamiltonian model of an imperfect Bose gas fluctuations in a perfect Bose gas and the equation of state of an imperfect gas A simple derivation of the Bloch equation is also presented along with the statistical mechanics of stellar systems Comprised of eight chapters this volume begins with a discussion on the occupation number representation by considering some relevant formulae from ensemble theory Classical petit and grand ensembles are described together with quanta1 petit and grand ensembles Subsequent chapters focus on the Green function method in statistical mechanics the pair Hamiltonian model of the imperfect Bose gas and its solution in the absence of Bose Einstein condensation using Green function methods and diagrammatic techniques fluctuations in a perfect Bose gas the equation of state of an imperfect gas and a simple derivation of the Bloch equation Finally the statistical mechanics of stellar systems and an approach to equilibrium are described This book will be of interest to physicists Selected Topics in Statistical Mechanics John G. A Series of Lectures Given by Dirk Ter Haar. March - April, 1967** D. ter Haar,1967 Select Topics of Econophysics Amit Sinha,2024-11-04 Economics requires understanding and analyzing forces that bring buyers and sellers to a market place who then negotiate exchanges of goods and services based on a mutually agreeable price Economists have their own method of modeling whereby models are first conceived of some notion of economic and financial thinking before being empirically tested and anomalies are then recognized if the observed data is inconsistent with the hypothetical underpinning This is in inherent contradiction with the modeling approaches of physicists who develop their theories principle and laws after observing empirical data The awareness that physics can enlighten the understanding of human behavior and thus economics and the interest of physicists in applying their training and models to understanding the complexities of finance and economics led to the creation of a new field of study appropriately termed as Econophysics Selected Topics on Econophysics is a collection of essays on topics that enhance and enrich our understanding of economic modeling when the same rigor of modelling used by physicists is brought to developing financial and economic theories These articles include discussions on modeling bitcoins stock index modeling using geometric Brownian motion agent based modeling wealth distribution modeling as well as modeling related to fractal

regression and chaotic processes This interdisciplinary book will interest researchers graduate students and professionals in the fields of economics finance as well as physics **Selected Topics in Statistical Mechanics** Dirk Ter Haar,1967
