How and why do complex scientific disciplines such as physics change emphasis from one sub discipline to another Do such transitions stem entirely from developments within the discipline itself or also from external factors This book addresses these questions by examining the transition from atomic to nuclear physics theoretically and experimentally at Niels Bohr s Institute for Theoretical Physics in Copenhagen in the 1930s On the basis of extensive archival research Finn Aaserud shows that the Copenhagen spirit the playful research atmosphere under Bohr s fatherly guidance that permeated the Institute thrived because of extra scientific circumstances that Bohr exploited to the fullest such as the need to help Jewish physicists out of Hitler s Germany and the changing funding policies of private foundations notably those of the Rockefeller Foundation which made it opportune to introduce research in experimental biology at the Institute A clear carefully developed and substantially convincing argument Aaserud gives a detailed and impressively documented account of the direction of Bohr s scientific interests Aaserud is to be congratulated for his original clear indeed didactic work of scholarship and enlightenment Paul Forman *Physics Today* A professional historian s study of the happenings at the Niels Bohr Institute in the decisive years 1930 to 1940 In particular the support of the Institute by Danish and other foundations mainly the Rockefeller Foundation are treated in great detail revealing many interesting aspects of these relationships The detailed accounts of Bohr s negotiations are a testimony to Bohr s uncanny ability to get what he wanted from the various foundations Aaserud s book is an invaluable source of information showing that Bohr was not only an inspiring physicist and philosopher but also a cunning negotiator who knew how to make use of his great reputation for the benefit of science Victor F Weisskopf *Science* Aaserud elucidates Bohr s skills not only as mentor and guiding hand behind the Copenhagen spirit but also as financial negotiator Neil Wasserman *Isis A Journal of the History of Science Society* This book teaches us that running such a truly elite institution required entrepreneurial skills as well as scientific genius Bohr had an abundance of both Jeremy Bernstein *Nature* *Redirecting Science* is the history of Bohr s institute during the 1930s when it experienced a drastic change in its research priorities from a laissez faire mode of work and lack of clearly defined research programme to a concerted research effort in nuclear physics and experimental biology Aaserud gives a highly interesting account of the interaction between physics and biology Aaserud s carefully documented work is an excellent example of how institutional history may transcend social and institutional limitations and integrate also conceptual history of science Helge Kragh *Centaurus* By showing that a new research programme at one of the most important scientific institutes in the world was triggered and pushed forward by social and financial considerations this book delivers yet another blow to the tired old idea that scientific

knowledge is driven by its own internal inexorable logic It also throws valuable light on Bohr's activities and strategies as a fundraiser and institution builder John Krige *The British Journal for the History of Science* George de Hevesy, *Life and Work* Hilde Levi, 1985 *Special Sources of Information on Isotopes* F. E. McKinney, 1968 **Lawrence and His Laboratory** J. L. Heilbron, Robert W. Seidel, 2023-09-01 The Radiation Laboratory in Berkeley California was the birthplace of particle accelerators radioisotopes and modern big science This first volume of its history is a saga of physics and finance in the Great Depression when a new kind of science was born Here we learn how Ernest Lawrence used local and national technological economic and manpower resources to build the cyclotron which enabled scientists to produce high voltage particles without high voltages The cyclotron brought Lawrence forcibly and permanently to the attention of leaders of international physics in Brussels at the Solvay Congress of 1933 Ever since the Rad Lab has played a prominent part on the world stage The book tells of the birth of nuclear chemistry and nuclear medicine in the Laboratory the discoveries of new isotopes and the transuranic elements the construction of the ultimate cyclotron Lawrence's Nobel Prize and the energy enthusiasm and enterprise of Laboratory staff Two more volumes are planned to carry the story through the Second World War the establishment of the system of national laboratories and the loss of Berkeley's dominance of high energy physics The Radiation Laboratory in Berkeley California was the birthplace of particle accelerators radioisotopes and modern big science This first volume of its history is a saga of physics and finance in the Great Depression when a new kind of science was
