**Desertification of the United States** David Sheridan, 1981

**Visions of the Land** Michael A. Bryson, 2002-06-29

The work of John Charles Fremont, Richard Byrd, Charlotte Perkins Gilman, John Wesley Powell, Susan Cooper, Rachel Carson, and Loren Eiseley represents a widely divergent body of writing. Yet despite their range of genres including exploration narratives, technical reports, natural histories, scientific autobiographies, fictional utopias, nature writing, and popular scientific literature, these seven authors produced strikingly connected representations of nature and the practice of science in America from about 1840 to 1970. Michael A. Bryson provides a thoughtful examination of the authors, their work, and the ways in which science and nature unite them. *Visions of the Land* explores how our environmental attitudes have influenced and been shaped by various scientific perspectives from the time of western expansion and geographic exploration in the mid nineteenth century to the start of the contemporary environmental movement in the twentieth century. Bryson offers a literary critical analysis of how writers of different backgrounds, scientific training, and geographic experiences represented nature through various kinds of natural science, from natural history to cartography to resource management to ecology and evolution, and in the process explored the possibilities and limits of science itself. *Visions of the Land* examines the varied, sometimes conflicting but always fascinating ways in which we have defined the relations among science, nature, language, and the human community. Ultimately, it is an extended meditation on the capacity of using science to live well within nature.

**Geology and Society** Donald Robert Coates, 2012-12-06

Mankind lives, works, and plays on the earth's surface. The majority of such human activities change in some manner the geological materials and processes of our planet. It is the basis of this book that an understanding of this relationship is significant. Furthermore, it is demonstrated that natural processes and events can in turn greatly affect society. Erosion devastates farms and grazing lands. The spectacular hazards of earthquakes, volcanoes, floods, and landslides can lead to disastrous loss of life and property. Thus, one theme in this book is to provide perspective on the duality of these impacts on the environmental scene. Geology is a key component that can lead to an improved understanding of these changes and influences. A careful orchestration of geological studies can help soften the deleterious aspects of nature and minimize the harmful byproducts of civilization. This is the central message that is repeated throughout these pages. This book is one of a series of volumes published and in preparation in the series entitled *Environmental Resources Management Books*. Already in print include two on soils and others on mineral resources and land use planning. These will be followed by books on surface water resources, groundwater resources, environmental pollution, energy resources, coastal environments, glacial environments, arid regional environments, and others. Chapter 1 provides the introduction and sets the

stage and tone for the book Chapters 2 3 and 4 deal with the resource base of society minerals fuels and water **The**
