Mathematical Reviews , 1986 **Proceedings of COMPSTAT'2010** Yves

Lechevallier, Gilbert Saporta, 2010-11-08 *Proceedings of the 19th international symposium on computational statistics held in Paris august 22-27 2010* Together with 3 keynote talks there were 14 invited sessions and more than 100 peer reviewed contributed communications Branching Processes Krishna B. Athreya, Peter E. Ney, 2012-12-06 The purpose of this book

is to give a unified treatment of the limit theory of branching processes Since the publication of the important book of T E Harris *Theory of Branching Processes* Springer 1963 the subject has developed and matured significantly Many of the classical limit laws are now known in their sharpest form and there are new proofs that give insight into the results Our work deals primarily with this decade and thus has very little overlap with that of Harris Only enough material is repeated to make the treatment essentially self contained For example certain foundational questions on the construction of processes to which we have nothing new to add are not developed There is a natural classification of branching processes according to their criticality condition their time parameter the single or multi type particle cases the Markovian or non Markovian character of the process etc We have tried to avoid the rather uneconomical and unenlightening approach of treating these categories independently and by a series of similar but increasingly complicated techniques The basic Galton Watson process is

developed in great detail in Chapters I and II Generalized Functions, Volume 4 I. M. Gel'fand, N. Ya. Vilenkin , 2016-04-19 The first systematic theory of generalized functions also known as distributions was created in the early 1950s although some aspects were developed much earlier most notably in the definition of the Green's function in mathematics and in the work of Paul Dirac on quantum electrodynamics in physics The six volume collection *Generalized Functions* written by I M Gel'fand and co authors and published in Russian between 1958 and 1966 gives an introduction to generalized functions and presents various applications to analysis PDE stochastic processes and representation theory The main goal of Volume 4 is to develop the functional analysis setup for the universe of generalized functions The main notion introduced in this volume is the notion

of rigged Hilbert space also known as the equipped Hilbert space or Gelfand triple Such space is in fact a triple of topological vector spaces $E \subset H \subset E'$ where H is a Hilbert space E' is dual to E and inclusions $E \subset H$ and $H \subset E'$ are nuclear operators The book is devoted to various applications of this notion such as the theory of positive definite generalized functions the theory of generalized stochastic processes and the study of measures on linear topological spaces

Specification Analysis in the Linear Model Maxwell L. King, David E. A. Giles, 2018-03-05 Originally published in 1987 This collection of original papers deals with various issues of specification in the context of the linear statistical model The volume honours the early econometric work of Donald Cochrane late Dean of Economics and Politics at Monash University in Australia The chapters focus on problems associated with autocorrelation of the error term in the linear regression model and include appraisals of early work on this topic by Cochrane and Orcutt The book includes an extensive survey of autocorrelation tests some exact finite sample tests and some issues in preliminary test estimation A wide range of other specification issues is discussed including the implications of random regressors for Bayesian prediction modelling with joint conditional probability functions and results from duality theory There is a major survey chapter dealing with specification tests for non nested models and some of the applications discussed by the contributors deal with the British National Accounts and with Australian financial and housing markets
