A. B. Hopkin, 2012-12-06 This book has a twofold purpose first to provide information for beginners about the pitfalls and hazards of anaesthesia and second to help the occasional anaesthetist in remote areas when confronted with requests to anaesthetise for unfamiliar surgical operations The book is not intended to replace any standard text for

anaesthetic examinations and indeed its lack of information about basic sciences makes it unsuitable for such a purpose The contents can be regarded as a distillate of 45 years of practical anaesthesia in both primitive and sophisticated conditions from the ether and chloroform rag and bottle days onwards through cyclopropane trichloroethylene relaxants and lytic cocktails to halothane The only operation mentioned of which I have no practical experience is thymectomy and removal of an argentaffinoma I have never knowingly encountered malignant hyperpyrexia but had one experience of what we called ether convulsions with hyperpyrexia which could have been and probably was the same thing An attempt has been made to arrange the book in four logical sections It begins with the hazards of preparation assessment of risks to patients particularly but Part I also includes chapters on medicolegal and occupational hazards to anaesthetists **The National Union**
