Selective Stimulus:

Avian Models for Social Cohesion Andras Csillag, Gergely Zachar, Giorgio Vallortigara, 2020-02-10 Animals living in groups are often linked to group or family members stronger than to other conspecifics and form stronger coalitions often based on genetic relatedness within such groups Effective cooperation within a group requires the preference for proximity of group members suppression of aggression toward conspecifics an ability to perceive and respond to social signals and to change often synchronize behavior accordingly Birds have long been used for a number of investigations involving sensory perception learning feeding strategies and vocal communication Recently they have been proposed as ideal model species even for psychiatric disorders affecting social cohesion such as autism spectrum disorder The physiological mechanisms and neural systems underlying different forms of sociability sexual and parental bonding group preference nesting care for offspring migration can often be studied easier in birds since their social behavioral repertoire as a taxon but sometimes also as individuals is more diverse than that of mammals By contrast with laboratory rodents birds rely less on olfactory cues Rather they tend to use visual and acoustic signals for social interactions much like humans Comparative approach and evolutionary relevance of studies using avian species have already yielded valuable results in several fields of neuroscience learning and memory imprinting acoustic communication birdsong neurogenesis seasonal changes in the song network With the advent of robust novel methods in molecular biology genomics and proteomics information technology and electronic engineering and also based upon an ever improving battery of behavioral tests avian research in social cohesion has likely gained a new impetus

Recent Progress in Hormone Research Roy O. Greep, 2013-10-22 Recent Progress in Hormone Research Volume 41 covers the proceedings of a Laurentian Hormone Conference held in late August 1984 at the Homestead in Hot Springs Virginia The book presents papers on the hormone receptor interactions the biosynthesis secretion metabolism and mechanism of action of the steroid hormones and the mechanisms of action of thyroid stimulating hormone TSH and TRH The text also includes papers on the molecular characterization of a brain specific mRNA and the factors affecting changes in frequency and amplitude of GnRH pulses and the resulting functional consequences in various mammals including humans with disorders of fertility Papers on the biological heritage of mammalian endocrinology such as the actions of urotensin I in mammals and fishes and the clinical implications of the glycosylation and posttranslational processing of the TSH are also encompassed Endocrinologists neuroscientists biochemists biophysicists and scientists involved in hormone research will find the book invaluable EPA-600/9, 1978-12

Animal Cognition Thomas R. Zentall, 2013-12-02 Prepared as a tribute to Donald A Riley the essays that appear here are representative of a research area that has loosely been classified as animal cognition a categorization that reflects a functionalist philosophy that was prevalent in Riley's laboratory and that many of his students absorbed According to this philosophy it is acceptable to hypothesize that an animal might engage in complex processing of information as long as one can operationalize evidence for

such a process and the hypothesis can be presented in the context of testable predictions that can differentiate it from other mechanisms The contributions to this volume represent the three most important areas of research in animal cognition stimulus representation memory processes and perceptual processes although current research has considerably blurred these distinctions

Behavior Analysis Henry S. Roane, Andrew R. Craig, Valdeep Saini, Joel E. Ringdahl, 2024-01-12

Throughout this text many of the research paradigms and methodologies across experimental analysis of behavior EAB and applied behavior analysis ABA are presented within the bench to bedside approach of translational research described by the National Institutes of Health The first few chapters of the text introduce underlying core tenets of behaviorism as well as core characteristics and methods that define the field of behavior analysis The next several chapters of the book introduce the reader to some of the foundational principles of behavior analysis with coverage from both the EAB and ABA perspectives The final chapters of the book cover topics for which there has been ample basic applied and translational research conducted The text concludes with a chapter on ethics which includes content related to ethical issues in research ethical issues in clinical practice and the ethical use of nonhuman animals and special populations in research

Making Space Jennifer M. Groh, 2014-11-05 Knowing where things are seems effortless Yet our brains devote tremendous power to figuring out simple details about spatial relationships Jennifer Groh traces this mental detective work to show how the brain creates our sense of location and makes the case that the brain s systems for thinking about space may be the systems of thought itself

Automaticity and Control in Language Processing Antje Meyer, Linda Wheeldon, Andrea Krott, 2007-01-24 Addresses key issues concerning the relationship between linguistic and non linguistic processes which will be of great interest to researchers and students in the area of language processing [After the Crisis. The Way Ahead](#) Jean-Paul Fitoussi, 2010 **Knowledge and Vision** , 2019-05-23 Knowledge and Vision Volume 70 the latest release in the Psychology of Learning and Motivation features empirical and theoretical contributions in cognitive and experimental psychology ranging from classical and instrumental conditioning to complex learning and problem solving Topics in this new release include Memorability How what we see influences what we remember The impact of prior

knowledge on visual memory Neural dynamics of visual and semantic object processing Comprehending and developing the meaning of visual narratives Attention and vision The role of learning and memory in early visual development The Information Content of Visual Categories What do neurons really want and more Contains coverage of an unusually broad set of emerging topics in language spanning comprehension and production and both speech and reading **Mechanisms of Visual Attention** Werner X. Schneider, Sabine Maassen, 1998 In order to produce coherent behaviour in a complex world forms of visual attention are necessary in order for us to select appropriate objects for action Over the past ten years there have been considerable advances in research into visual attention with many of these advances linked to interdisciplinary research in experimental psychology neuropsychology neurophysiology and functional imaging This work has begun to allow us to understand not only the functional properties of visual attention but also how attentional processes are localized in the brain the cognitive neuroscience of visual attention This special issue draws together research from leading figures in this field to highlight recent progress in understanding how selective processes operate in perception and action **Emotions of Normal People** William Moulton Marston, 2013-04-16 This fascinating volume contains a comprehensive treatise on human emotion with chapters on love submission dominance consciousness and more Written in simple accessible language and full of interesting explorations of theorems and original expositions this volume will be of considerable value to those with a keen interest in psychology and would make for a great addition to collections of allied literature The chapters of this volume include Normalcy and Emotion Materialism Vitalism and Psychology The Psychonic Theory Of Consciousness Motor Consciousness as the basis of Feeling and Emotion Integrative Principles of Primary Feelings etcetera William Moulton Marston 1893 1947 also known by the pen name Charles Moulton was an American psychologist inventor and comic book writer who created the character Wonder Woman We are republishing this antiquarian volume now complete with a new prefatory biography of the author **Comparative Cognition** Edward A. Wasserman, Thomas R. Zentall, 2009-04-08 This volume celebrates comparative cognition's first quarter century with a state of the art collection of chapters covering the broad realm of the scientific study of animal intelligence Comparative Cognition will be an invaluable resource for students and professional researchers in all areas of psychology and neuroscience **Visual Information Processing** Kimiyo Murata-Soraci, 2003-03-30 Visual information processing in humans with intellectual disabilities and in animals is presented for conceptual and methodological reasons Much of the evolutionary path of higher primate species has involved the development of sophisticated visual systems that interact with complex higher order cognitive processes Key questions in cognitive science address the manner in which the environment is represented by the organism and thus relate to how knowledge about the world is gleaned with implications for theories of action and decision making Finally it has become apparent that the distinction between perceptual and cognitive processes is not always a clear one and that these processes interact in critical ways in underlying complex behavioral repertoires Consistent with the emphasis in this series on

individual differences both typical and atypical development are explored here Philosophical approaches to visualism are also presented Chapters have import both for basic science and for the development of applications **The Neuron and the Mind** William R. Uttal, 2016-07-01 This book a companion to William R Uttal s earlier work on macrotheories theories of mind brain relationships reviews another set of theories those based on microneuronal measurements Microneuronal theories maintain the integrity of individual neurons either in isolation or as participants in the great neuronal networks that make up the physical brain Despite an almost universal acceptance by cognitive neuroscientists that the intangible mind must in some way be encoded by network states Uttal shows that the problem of how the transformation occurs is not yet supported by empirical research findings at the micro as well as at the macro levels of analysis Theories of the neuronal network survive more as metaphors than as robust explanations This book also places special emphasis on the technological developments that stimulate these metaphors A major conclusion drawn in this book is that it is not at all certain that the mind brain problem is solvable in the sense that many other grand scientific problems are *Procedures in Developing Character Controls Through Instruction* Oamer Daniel Priddle, 1929
