Sociological Perspectives on Labor Markets B. Furåker, 2005-10-11 This book presents conceptual tools and theoretical perspectives that can be used to sociologically analyze labour markets in modern capitalist societies. It makes use of the rich heritage of sociological thinking and draws on the classical work of Marx, Weber, and Durkheim, as well as structural functionalist contributions. Contemporary sociological thinking is criticized for its tendency to exaggerate change in labour markets while the need to consider continuity is emphasized. Conceptual tools and perspectives are applied based on concrete phenomena as the author combines abstract theoretical reasoning with theoretically founded reflections on actual labour market developments.

Hispanic Entrepreneurs in the 2000s Alberto Dávila, Marie T. Mora, 2013-10-16 Hispanics account for more than half the population growth in the United States over the last decade. With this surge has come a dramatic spike in the number of Hispanic owned businesses. *Hispanic Entrepreneurs in the 2000s* is a pioneering study of this nascent demographic. Drawing on rich quantitative data, authors Alberto Dávila and Marie T. Mora examine key economic issues facing Hispanic entrepreneurs such as access to financial capital and the adoption and vitality of digital technology. They analyze the varying effects that these factors have on subsets of the Hispanic community such as Mexican Americans, Puerto Ricans, Cubans, and Salvadorans while considering gender and immigrant status. This account highlights key policies to drive the success of Hispanic entrepreneurs while drawing out strategies that entrepreneurs can use in order to cultivate their businesses. Far reaching and nuanced, *Hispanic Entrepreneurs in the 2000s* is an important study of a population that is quickly becoming a vital component of American job creation.

Heterogeneity Among Mexico's Micro-enterprises Wendy V. Cunningham, 1998 The small firm sector comprises several types. Although some are a refuge for displaced salaried workers, most were started by workers who chose to be entrepreneurs and they show dynamics consistent with patterns in the industrial world. A long tradition sees the small firm sector as a holding pattern for workers queuing for jobs in the formal sector of a segmented labor market. An alternative entrepreneurial view suggests that many workers prefer self employment to salaried jobs. These competing views

can be resolved if the sector is heterogeneous. Using factor and cluster analysis, Cunningham and Maloney generate a typology of the sector by taking advantage of a Mexican data set on micro firms that offers information on a broad range of small firm characteristics. The methodology permits divisions to emerge from the data without the a priori imposition of a theoretical structure. The data break into several distinct groups broadly characterized as highly profitable and dynamic young firms, older firms that have stabilized at a small size, and young firms that act as an employer of last resort. Those in the last group comprised of older entrepreneurs with low levels of education are the most likely to cite that they started their firms because they were unable to find a salaried job. In general, most of the firm owners in all groups stated that they chose self employment over formal sector employment in order to be independent, collect higher earnings, or follow family tradition. These survey responses are supported by the finding that income distribution adjusted for human capital is composed of two subdistributions, with the underperforming distribution comprising only 14 percent of the sample. The factor analysis also implies that firm owner characteristics and firm size or profitability may not be correlated. For example, young workers who we might think are forced into the small firm sector due to inability to enter the formal job market do not necessarily earn less or have less capital than older entrepreneurs. Furthermore, a distribution of the earnings residual factor shows that very few firms, regardless of the firm owner's age, are earning below their expected profits. The data suggest that the small size of informal firms may not necessarily result from limited access to financial institutions or a desire to evade labor or tax laws. Instead, the firms simply may be in the beginning stages of a growth process, or owners may prefer to remain small.
