Self Organizing Universe:

The Self-organizing Universe Erich Jantsch, 1980 The book with its emphasis on the interaction of microstructures with the entire biosphere ecosystems etc and on how micro and macrocosmos mutually create the conditions for their further evolution provides a comprehensive framework for a deeper understanding of human creativity in a time of transition **At Home in the Universe** Stuart Kauffman, 1995 This exciting exploration into the nature of life brilliantly weaves together the excitement of intellectual discovery and a fertile mix of insights to give the general reader a fascinating look at the new science of complexity and at the forces for order that lie at the edge of chaos An important new argument Carl Sagan The Washington Post 59 illustrations **The Self-organizing Polity** Laurent Dobuzinkis, 2019-07-11 Is the study of living systems a useful metaphor for political science In this book Dr Dobuzinkis argues for further exploration of biopolitical models to explain the complexity of political theory and social change His discussion emphasizes the new cybernetics which considers not only self regulating but also self organizing or self producing systems Self organizing systems operate in an autonomous sphere comparable to the autonomy of the political community and the political actors who compose this community The autonomy of these systems is maintained through dynamic equilibration processes that entail not only the preservation of a given structure but also at crucial times the creative rearrangement of the existing structure and its transformation into a new pattern of relations From this perspective a political crisis is both a threat to the political system and the occasion of its renewal stability may also mean decay Emphasizing the links that have developed historically between the natural and social sciences this book is a reflection on the merits of and difficulties involved in representing the evolutionary process at the political level as the problematic reproduction of national communities and states *Into the Cool* Eric D. Schneider, Dorion Sagan, 2005-06 The authors look to the laws of thermodynamics for answers to the questions of evolution ecology economics and even life s origin **Science and Religion** John F. Haught, 1995 Has science made religion intellectually implausible Does it rule out the existence of a personal God In an age of science can we really believe that the universe has a purpose And finally doesn t religion hold much of the blame for the present ecological crisis These questions form the nucleus of today s debate between science and religion This book is a guide for that debate identifying the questions isolating the issues and pointing to ways the questions can be resolved There are four possible ways says John F Haught that we can view the relationship between religion and science First they can stand in complete opposition the conflict position Or we can believe they are so different that conflict is impossible the contrast position A third approach holds that while science and religion are distinct each has important implications for the other A fourth way views them as different but mutually supportive **BOOK JACKET** Title Summary field provided by Blackwell North America Inc All Rights Reserved [From Systems to Actor-Networks](#) Andréa Belliger, David Krieger, 2024-02-09 This book documents a paradigm shift not only in the sciences but also in society Everywhere in society systems are becoming networks This implies not only a

new understanding of social science but also of society and ourselves The book describes the systems model based on Luhmann s theory of social systems and compares this to Latour s actor network theory It argues that present day society cannot be successfully modeled as a system and illustrates the transformation to a global network society by citing many examples from business education and healthcare The authors argue that actor network theory provides a more comprehensive account of these changes than systems theory Based on actor network theory they propose a theory of the digital transformation that is ushering in the global network society Although people in all areas talk about systems adaptive behavior evolution complexity and networks few know where these concepts come from and what they mean in the theories they belong to This book is for all who are concerned with clarifying the often taken for granted assumptions and concepts that are implicitly or explicitly derived from systems theory and network theory It offers an introduction to the work of Luhmann and Latour and a critical and constructive development of these important theories for the 21st century

The Archetypal Cosmos Keiron Le Grice, 2011-06-09 The modern world is passing through a time of critical change on many levels cultural political ecological and spiritual We are witnessing the decline and dissolution of the old order the tumult and uncertainty of a new birth Against this background there is an urgent need for a coherent framework of meaning to lead us beyond the growing fragmentation of culture belief and personal identity Keiron Le Grice argues that the developing insights of a new cosmology could provide this framework helping us to discover an underlying order shaping our life experiences In a compelling synthesis of the ideas of seminal thinkers from depth psychology and the new paradigm sciences Le Grice positions the new discipline of archetypal astrology at the centre of an emerging world view that reunifies psyche and cosmos spirituality and science mythology and metaphysics and enables us to see mythic gods heroes and themes in a fresh light He draws especially on the work of C G Jung Joseph Campbell Richard Tarnas Fritjof Capra David Bohm and Brian Swimme Heralding a rediscovery of the gods and the passage

into a new spiritual era The Archetypal Cosmos presents a new understanding of the role of myth and archetypal principles in our lives one that could give a cosmic perspective and deeper meaning to our personal experiences *Spatial Entropy and Landscape Analysis* Fivos Papadimitriou,2022-02-03 This is the first book on spatial entropy in the scientific literature It links spatial entropy with landscape analysis landscape diversity and geo information It gives all the essential tools that a researcher needs in order to study the spatial entropy of physical as well as artificial landscapes created with artificial life swarm intelligence etc This book explores the fascinating world of the interplay between spatial entropy spatial information self organization and emergence and gives geographers and landscape scientists several alternative mathematical methods to study them i e Shannon s formula measures from non extensive thermodynamics from directional statistics and network theory An essential book for researchers in landscape analysis and geo informatics **Emergence and Embodiment** Bruce Clarke,Mark B. N. Hansen,2009-10-30 Explores the cultural legacy of cybernetics and neocybernetics the cybernetics of cybernetics that offers new insight on the role of the human in an era of the posthuman **Infinite Reach** John E. Biersdorf,2016-06-16 *Infinite Reach* Spirituality in a Scientific World connects and integrates the great spiritual insights with science and mathematics for the increasing numbers of Americans who consider themselves spiritual but not religious or spiritual and religious or none of the above and who no longer find traditional religious doctrines and institutions credible or matching their experience In nontechnical language it precisely and clearly traces how current brain mind research informs and enhances inner spiritual and religious experience and how scientific cosmology confirms spiritual intuitions From hunting gathering prehistory through city states empires and the great religions scientific methods advance exponentially faster into the future while the great spiritual insights have never been surpassed though often ignored or denied But scientific knowing and spiritual knowing share infinite reach Brain mind research contributes to understanding and living meditation and spiritual practices in silence ritual and vision Modern physics and mathematics demonstrate how humans observe and participate in the actual evolution of the universe Fractals in chaos theory are spiritual images of ultimate reality In creating loving and undifferentiated presence we find our own unique voice in the mystery of ultimate reality touching down here and now in the specifics of this present moment **Thinking Through Poetry** Marjorie Levinson,2018-07-11 *Thinking through Poetry* Field Reports on Romantic Lyric pursues two goals The title signals the contribution to debates about reading Do we think through by means of with poems sympathetically elaborating their surfaces Is this compatible with a second meaning thinking through poems to their end solving a problem getting to its root its deep truth Third can we square these surface and depth readings with a speculative philosophical criticism to which the poem carries us where through denotes a going beyond All three meanings of through are in play throughout The subtitle applies field first to Romantic studies since the 1980s a field that this project reflects upon from beginning to end Examples are drawn especially from Wordsworth but also from Coleridge and in assessing Romanticism s afterlife from Stevens Field also characterizes the

shift from a unitary to a field concept of form during that time span a shift pursued through prolonged engagement with Spinoza Field thus underscores the synthesis of form and history the importance of analytic scale to that synthesis and the displacement of entity text by relation as the object of investigation While the book historically connects early nineteenth century intellectual trends to twentieth and twenty first century scientific revolutions its focuses on introducing new models to literary criticism Unlike accounts of the influence of science on literature or various literature X approaches literature and ecology literature and cognitive science it constructs its object of inquiry in a way cognate with work in non humanities disciplines thus highlighting a certain unity to human knowledge The claim is that specialists in literature should think the way distinguished scientists think and vice versa

Complexity and Organization Robert Macintosh,Donald Maclean,Ralph Stacey,Douglas Griffin,2013-10-16 In the past decade complexity based thinking has exerted an increasing yet somewhat controversial authority over management theory and practice This has in some part been due to the influence of a number of high profile articles and the not inconsiderable hype which has accompanied them Another feature of the subject s development has been the diversity of the origins of the thinking and the claims which have been made for it in terms of managerial and organizational implications **Complexity and Organization** is the first text to bring this thinking together presenting some of the most influential writing in the field showing how the subject has developed and how it continues to influence managerial thinking Seminal contributions to the field have been brought together in a single accessible volume allowing readers to access what might otherwise appear a very diverse body of literature Moreover the editors who represent some of the leading thinkers and writers in this field have combined these readings with a unique commentary indicating not only the importance of the papers but teasing out the subtle but significant differences and similarities between them These commentaries take the form of a discussion between the editors debating the contribution that each paper has made to the field and the influence it has had on management thinking

The Universal Kabbalah Leonora Leet,2004-09-29 This landmark work by an innovative modern Kabbalist develops a scientific model for kabbalistic cosmology and soul psychology Derived from the kabbalistic diagram of the Tree of Life and the author s own Sabbath Star diagram this universal model encodes the laws of all cosmic manifestation giving a mathematical basis to many aspects of this mystical tradition and providing a new synthesis of science and spirituality that may well write a new chapter to the Kabbalah

Theoretical Knowledge Viacheslav Semenovich Stepin,2005-07-12 He shows direct and inverse links between foundations of science and new theories and empirical facts evolved from those how among many potentially possible histories of science a culture selects just those directions which become a real history of science The author analyses mechanisms of the generation of scientific theories and shows that those are changed in the process of historical development of science He displays three historical types of scientific rationality classical non classical and post non classical which appears in modern science and shows features of their coexistence and interplay It is shown that along with the emerging of post non classical rationality science increases the sphere of its worldview applications Science begins to correlate not only with the basic values of technogenic civilization but also with some values and patterns of traditional cultures

Acorns: Windows High-Tide Foghat Joshua Morris,2013-01-23 Acorns delineates the future of humanity as a reunification of intellect with the Deep Self Having chosen to focus upon ego established securely by the time of Christ much more beta brain wave development will destroy our species and others which process has already begun We create our own realities through beliefs intents and desires and we were in and out of probabilities constantly Feelings follow beliefs not the other way around

Natural and Cosmic Theodicy Jongseock James Shin,2022-10-21 This book presents a

third way to envision the Creatorship of the Triune God who is both compassionate and eschatologically redemptive in providential presence rather than biasedly gravitating toward the openness of a self limiting God or God s all determining sovereignty Not only is God in with and under creation God s kenotic presence invites creatures to participate in the self giving love of God through both general and special divine action in a top down through bottom up mode Creatio continua is God s own journey of fulfilling the eschatological promise for creation This redemptive presence of God in creation is a Trinitarian co protesting against the power of death sin and evil considering the cosmic dimensions of the eschatological hope promised in the resurrection of Jesus The new creation is the ultimate fulfillment of creaturely freedom and contingency divinely granted in creatio ex nihilo In arguing this Shin engages in a comparative and critical study of natural and cosmic theodicy advanced by Catherine Keller Arthur Peacocke Wolfhart Pannenberg and Robert Russell
