Self, Earth, and Society Thomas N. Finger, 2020-03-12 Our era is experiencing unparalleled and rapid transience The twentieth century began with the telephone and ended with e mail People change jobs and homes a half dozen times or more in their lives Air and water pollution are threatening the well being of the earth itself Wars their multiplying refugees and political crises are tearing societies apart If there is a key word for our era it might be alienation Amid increasing and often chaotic complexity individuals struggle to attain an integrated stable self with durable relationships An expanding ecological consciousness reveals our estrangement from the earth Societies are internally divided by clashing political and economic perspectives and processes This profound and important book recognizes and reveals the connections among these three alienations Thomas Finger undertakes a probing critical conversation with culture and develops his own public theology Each alienation is analyzed in depth through the writings of secular authors His theological construction draws neither on modern philosophy nor worldviews but perhaps surprisingly on Scripture To support his emphasis on Christ Finger engages the skepticism of the much celebrated Jesus Seminar He rejects the widespread claim that Christianity s transcendent God is largely absent from the world and legitimates human exploitation of it For transcendence means that God is different but not distant from the world Finger then examines the roles of Jesus Father and Spirit in his earthly ministry In this and later scriptures these three act and interact in a salvific manner that can only be divine This means that his Father and Spirit also suffer with Jesus in his death and with all creation as Jürgen Moltmann brilliantly explains and accompany him in his resurrection This also means that the creation exists in God as some feminists maintain and originated as the overflow of God s love and character into a realm which was hardly distant from God yet very different In addition this entails that every human self and the process of becoming a self as God s creations must be respected as indeed must all earthly creatures and the basic structures needed to form and maintain any society Theological developments in the last decade have done much to critique misguided biblical interpretations which would justify unbridled human exploitation and abuse of creation But work in exploring how an understanding of a trinitarian transcendent God results in creative and caring relationship between humanity and creation has been less developed In discussing these matters with Dr Finger I am convinced that his proposed work holds the promise of meeting an important need within global theological discussions today Further I know that Dr Finger is fully capable of accomplishing this project Thus from my vantage point where I have the opportunity of hearing theological discussions on these subjects from the major Christian traditions and from throughout the globe it is clear that Dr Finger s proposal will fill a theological void and enrich

The Selfless Mind Peter Harvey, 2013-09-13 This careful analysis of early Buddhist thought opens out a perspective in which no permanent Self is accepted but a rich analysis of changing and potent mental processes is developed. It explores issues relating to the not-Self, teaching self-development, moral responsibility, the between-lives period and the undetermined questions on the world, on the life principle and on the liberated one after death. It examines the person as a flowing continuity centred on consciousness or discernment, *vinnana* configured in changing minds, *sets* *cittas*. The resting state of this is seen as brightly shining like the Buddha nature of Mahayana thought so as to represent the potential for Nirvana. Nirvana is then shown to be a state in which consciousness transcends all objects and thus participates in a timeless unconditioned realm

Re-Thinking the Sociality of the Self Kurt C. M. Mertel, 2025-07-16 This book is the first in a two-volume project that provides the first systematic interpretation of Martin Heidegger's fundamental ontology as a critical social ontology. It argues that fundamental ontology is at its core an emancipatory enterprise in that it is animated by an intent shared with critical theory, viz. to make philosophy concrete for the sake of individual and collective freedom. Focused on Division One of Being and Time, this volume maintains that the possibilities of individual emancipation and self-actualization are inextricably bound to their environmental and intersubjective preconditions. An adequate ontology of the self therefore is possible only as a social ontology. To fulfill its emancipatory aims, however, it is necessary to show that the fact that individuals are always already appropriated by society does not preclude the possibility of authentic self-appropriation. Hence this volume critically reconstructs the core commitments of the appropriative approach to social ontology and distinguishes between the foundational and peripheral aspects of fundamental ontology. The final part addresses important criticisms that have impeded a fruitful dialogue between fundamental ontology and critical theory to clear the ground for a fresh re-appraisal of the former as an emancipatory project.

Discovering Computer Science Jessen Havill, 2016-07-06 *Discovering Computer Science: Interdisciplinary Problems, Principles, and Python Programming* introduces computational problem solving as a vehicle of discovery in a wide variety of disciplines. With a principles-oriented introduction to computational thinking, the text provides a broader and deeper introduction to computer science than typical introductory programming books. Organized around interdisciplinary problem domains rather than programming language features, each chapter guides students through increasingly sophisticated algorithmic and programming techniques. The author uses a spiral approach to introduce Python language features in increasingly complex contexts as the book progresses. The text places programming in the context of fundamental computer science principles such as abstraction, efficiency, and algorithmic techniques and offers overviews of fundamental topics that are traditionally put off until later courses. The book includes thirty well-developed independent projects that encourage students to explore questions across disciplinary boundaries. Each is motivated by a problem that students can investigate by developing algorithms and implementing them as Python programs. The book's accompanying website <http://discoverCS>

denison.edu includes sample code and data files pointers for further exploration errata and links to Python language references Containing over 600 homework exercises and over 300 integrated reflection questions this textbook is appropriate for a first computer science course for computer science majors an introductory scientific computing course or at a slower pace any introductory computer science course
