Self Regulation Theory How Optimal Adjustment Maximizes Gain:

Self-Regulation Theory Dennis Mithaug,1993-02-28 The author s Self Regulation Theory explains how people optimize their adjustments in order to maximize their gains toward getting what they want from their environments It describes the reciprocal effects of human adjustment and environmental change The interaction among what regulators expect how they choose and what they do affects and is affected by optimal and suboptimal environmental contingencies Although Self Regulation Theory is consistent with current behavioral cognitive and cognitive behavioral models of adjustment it goes beyond them by describing the problem solving and solution doing mechanisms that lead to optimal adjustments and maximal gains This permits the theory to predict precise relationships between self regulated gain towards goal attainment and the consequences of goal attainment Although the conclusions do not contradict generally accepted views they challenge current perspectives on how to define and analyze the problem of adaptation By separating the mechanism of self regulation from the environmental effect it produces we can examine the unique contribution of the self regulating system to its own success or failure Also by defining environmental optimalities from the perspective of the regulator we can assess how the same menu of environmental opportunities changes from being suboptimal to optimal as a function of the regulator s success in adjusting

THEORY IN SELF-DETERMINATION Michael L. Wehmeyer,Brian H. Abery,Dennis E. Mithaug,Roger J. Stancliffe,2003-01-01 This text provides a comprehensive overview of three theoretical perspectives proposed during the past decade addressing the self determination construct as it applies to the field of special education The three models were selected primarily because they have focused on defining and categorizing self determination for all students with disabilities including students with mental retardation and other cognitive disabilities These models are intended to provide students

and practitioners a solid grounding in self determination theory All models have been evaluated among students with cognitive disabilities but are applicable to all students with or without disabilities The authors research each model and have applied their own theoretical framework to special education ensuring that interventions to promote skills like problem solving goal setting decision making and self advocacy are in place for all students By reading this text the reader will gain a solid theoretically based foundation in understanding the self determination construct which ultimately supports the development of instructional interventions that enable students with disabilities to become self determined It will be useful as a text in upper undergraduate and graduate courses in special education psychology social work welfare general education vocational rehabilitation and disability studies , *Self-determined Learning Theory* Deirdre K. Mithaug, Martin Agran, James E. Martin, Michael L. Wehmeyer, 2002-12-18 This volume brings together four semi autonomous bodies of research choice self determination self regulation and self management to form a new theory of self engaged learning entitled Self Determined Learning Theory This theory explains why and how students self engage It identifies the factors that give students the sense of control over their learning that is needed for sustained adaptive and ultimately successful learning It begins by describing the characteristics of disengaged learners then describes and illustrates self determined learning theory within both normal and special populations It then examines the theory s predictive value across several special population contexts and then concludes with a critique of the theory s credibility and worth Divided into three sections theory construction theory verification and theory evaluation this volume is organized using the four steps of a previous book Learning to Theorize A Four Step Strategy Step 1 defines a problem of not understanding something as discrepancy between what is known and not known about a circumstance Step 2 searches for information and explanations to change the condition of not knowing into a condition of knowing Step 3 evaluates the credibility and worth of the explanation constructed in Step 2 Step 4 adjusts existing beliefs so they are consistent with the new theory Although aimed primarily at leaders in special education it should also appeal to researchers and scholars in psychology educational psychology and school psychology who are interested in the applications of self regulated learning theory in this case to special populations

Identifying Conceptual Skills of Future Battle Commanders Shawn A. Noble, 2000 **Technical Report**, 2000 *Equal Opportunity Theory* Dennis E. Mithaug, 1996-05-21 A comprehensive and detailed explanation of the equal opportunity principle that influences social policy today is provided in this book Dennis E Mithaug addresses the discrepancy between the right and the experience of self determination and explains our collective responsibility for assuring fair prospects for self determination for all The logical philosophical and psychological basis for equal opportunity theory is presented as is the social and judicial background Finally the optimal prospects principle is examined Contemporary Issues in Behavior Therapy Joseph R. Cautela, Waris Ishaq, 2013-11-21 Contemporary Issues in Behavior Therapy presents innovative approaches to various societal problems worldwide Contributors explore issues from diverse areas such as behavioral medicine education developmental disability poverty problematic behavior and developmental considerations ie early family experiences and aging process The volume stimulates ideas for research prevention and treatment as well as for managing other modern ills including homelessness crime and aggression **Self-instruction Pedagogy** Dennis E. Mithaug, Deidre K. Mithaug, 2007 This book describes a method of teaching that fosters autonomous learning in all students including students with disabilities The pedagogy is based on decades of research on strategy instruction as well as on a theory of learning that claims these four conditions promote self determined learning in all learners 1 opportunities to choose expectations for gaining something from a learning challenge 2 strategies that regulate responses to meet those expectations 3 comparisons between results and expectations that provoke additional adjustment in expectations and responses and 4 persistent engagement and adjustment until results match expectations The pedagogy of self instruction described in this book anchors these conditions in everyday instruction so students can learn by adjusting to their own expectations Chapter 1 compares this approach to the teacher directed methods of direct instruction that require teachers to set expectations for students control how students respond to them evaluate the outcomes they produce and then prescribe adjustments students must make to improve Chapter 2 provides evidence that too much of special education instruction reflects this teacher directed approach and as a consequence discourages students from learning how to learn on their own Chapters 3 6 identify four ways to shift learning control from teachers to students and Chapters 7 and 8 identify the obstacles to achieving this instructional shift in special education The appendices of the book provide a bibliography of research on self instruction and direct instruction pedagogies and a validated self assessment that can evaluate the directedness of your teaching **Self-regulation of Learning and**

Performance Dale H. Schunk, Barry J. Zimmerman, 2023-01-06 In recent years educators have become increasingly concerned with students' attempts to manage their own learning and achievement efforts through activities that influence the instigation, direction, and persistence of those efforts. In 1989, Zimmerman and Schunk edited the first book devoted to this topic. They assembled key theorists offering a range of perspectives on how students self-regulate their academic functioning. One purpose of that volume was to provide theoretical direction to ongoing as well as nascent efforts to explore academic self-regulatory processes. Since that date, there has been an exponential surge in research. This second volume on academic self-regulation offers the fruits of the first generation of research. It also addresses a number of key issues that have arisen since then, such as how self-regulation differs from such related constructs as motivation and metacognition and whether students can be taught self-regulatory skills. The contributors reveal an interesting, uplifting and at times disturbing picture of how students grapple with the day-to-day problems of achieving in circumstances with inherent limitations and obstacles. This volume provides insight into the source of students' capabilities to surmount adversities, the origins of their self-initiated processes designed to improve learning, motivation, and achievement. The text is organized on the basis of a conceptual framework that analyzes academic self-regulation into four major dimensions. That model is presented in the first chapter, and key processes that influence each of these dimensions are discussed by prominent researchers in the chapters that follow. Because each chapter is written to follow a common format, this work provides a level of continuity and parsimony normally found only in authored textbooks.

Handbook of Self-Help Therapies Patti Lou Watkins, George A. Clum, 2007-11-28 This volume constitutes the first solidly research-grounded guide for practitioners wending their way through the new maze of self-help approaches. The Handbook of Self-Help Therapies summarizes the current state of our knowledge about what works and what does not, disorder by disorder and modality by modality. Among the covered topics are self-regulation, theory, anxiety disorders, depression, childhood disorders, eating disorders, sexual dysfunctions, insomnia, problem drinking, smoking cessation, dieting, and weight loss. Comprehensive in its scope, this systematic, objective assessment of self-help treatments will be invaluable for practitioners, researchers, and students in counseling psychology, psychiatry, and social work, health psychology, and behavioral medicine.
