the camels and elephants used by Alexander the Great and goes on to write about the use of horses ships railways aircraft and helicopters he goes on to trace the development of military dependency on commercial interests from the days when commanders bought rented or stole animals to the present day reliance on airlines and the merchant marine with its use of containerisation The book contains many previously unpublished photographs and fills an important gap in the study of military transport Front flap of book jacket **The airship's potential for intertheater and intratheater airlift ,**
