Abstract: In an e-commerce or e-service environment, workflow involves not only a single organization but also a number of business partners. Workflow inter-operability is therefore an important issue for workflow enactment in such an environment. In this paper, we propose the use of workflow views as a fundamental support for workflow inter-operability and for visibility by external parties. We present taxonomy of workflow views, discuss various components of a workflow view, and their semantics with example usage. We also demonstrate how contracts can be facilitated with a supply-chain example.

Keywords: workflow management, workflow view, virtual enterprises, inter-organization workflow, e-commerce, meta-modeling, contracts, ECA rules.

1. INTRODUCTION

Workflow technology provides a way of modeling and automating business process. A Workflow Management System (WFMS) is a system that assists in defining, managing, and executing workflows. However, current research work mainly concentrates on workflows within a single organization. In a B-to-B e-commerce environment, a business process usually involves many participating organizations, i.e., such a business process involves several inter-operating and interacting workflows from different organizations. This is known as inter-organizational workflow. To support workflow inter-operability, one of the basic requirements is a mechanism to let authorized external parties access and make use of only relevant and authorized parts of a workflow, while maintaining the privacy of other unnecessary/unauthorized information. Motivated by views in federated object databases, we propose the use of workflow views as a fundamental mechanism for inter-organization workflow derivation. A workflow view can be regarded either as a structurally correct subset of a

Engineering Knowledge in the Age of the Semantic Web Enrico Motta, Nigel Shadbolt, Arthur Stutt, Nick Gibbins, 2011-03-22 The central themes of the 14th International Conference on Knowledge Engineering and Knowledge Management EKAW 2004 were ontological engineering and the Semantic Web These provide the key foundational and delivery mechanisms for building open Web based knowledge services However consistent with the tradition of EKAW conferences EKAW 2004 was concerned with all aspects of eliciting acquiring modelling and managing knowledge and its role in the construction of knowledge intensive systems Indeed a key aspect of the Knowledge Acquisition Workshops KAWs held in the US Europe and Asia over the past 20 years has been the emphasis on holistic knowledge engineering addressing problem solving usability socio technological factors and knowledge modelling rather than simply analyzing and designing symbol level inferential mechanisms The papers included in this volume are thus drawn from a variety of research areas both at the cutting edge of research in ontologies and the Semantic Web and in the more traditionally grounded areas of knowledge engineering A Semantic Web service can be seen as the addition of semantic technologies to Web services to produce Web accessible services that can be described using appropriate ontologies reasoned about and combined automatically Since Web services can be seen as Web accessible computational objects much of the work in this area is also concerned with problem solving methods PSMs

The Functional Approach to Data

Management Peter M.D. Gray, Larry Kerschberg, Peter J.H. King, Alexandra Poulovassilis, 2013-06-29 It is over 20 years since the functional data model and functional programming languages were first introduced to the computing community Although developed by separate research communities recent work presented in this book suggests there is powerful synergy in their integration As database technology emerges as central to yet more complex and demanding applications in areas such as bioinformatics national security criminal investigations and advanced engineering more sophisticated approaches like those presented here are needed A tutorial introduction by the editors prepares the reader for the chapters that follow written by leading researchers including some of the early pioneers They provide a comprehensive treatment showing how

the functional approach provides for modeling analysis and optimization in databases and also data integration and interoperation in heterogeneous environments Several chapters deal with mathematical results on the transformation of expressions fundamental to the functional approach The book also aims to show how the approach relates to the Internet and current work on semistructured data XML and RDF The book presents a comprehensive view of the functional approach to data management bringing together important material hitherto widely scattered some new research and a comprehensive set of references It will serve as a valuable resource for researchers faculty and graduate students as well as those in industry responsible for new systems development
