God in the Act of Reference Erica Appelros, 2017-03-02 To claim to believe in God without accepting that God exists independently of human minds would mean reducing God to merely a human construct thus not real enough for being the object of religious worship This book sets out to challenge this common view on existence and religious belief Arguing from concrete examples of language use in children's make believe play and other ordinary situations Erica Appelros suggests that what makes us consider something to be real involves our capacities to relate to our surroundings not only on grounds of their physical characteristics but also on grounds of human construction This book makes a substantial contribution to the contemporary debate within philosophy of religion on religious realism and non realism and suggests innovative and constructive solutions to the perennial philosophical and religious issue of what is meant by talking about God and God's existence

administrators and education students who wish to become leaders in their fields **Language in Context** Jason Stanley, 2007-07-05 Natural languages all contain constructions the interpretation of which depends upon the situation in which they are used In Language and Context Jason Stanley presents a series of essays which develop a theory of how the situation in which we speak interacts with the words we use to help produce what we say The reason we can so smoothly operate with sentences that can be used to express very different items of information Stanley argues is that there are linguistically mandated constraints on the effects of the situation on what we say These linguistically mandated constraints are most evident in the cases of sentences containing explicit pronouns such as She is a mathematician where interpretation of the information expressed is guided by the use of the pronoun she But even when such explicit pronouns are lacking our sentences provide similar cues to allow our interlocutors to determine the information expressed We are in the main confident that our interlocutors will smoothly grasp what we say because the grammar and meaning of our sentences encodes these constraints In defending this theory Stanley pays close attention to specific cases of context sensitive constructions such as quantified noun phrases comparative adjectives and conditionals Philosophers and cognitive scientist have appealed to the dependence of what is intuitively said by a sentence on the situation in which it is uttered to argue against the possibility of a systematic theory of meaning for natural language The theory developed in this book is a vigorous defence of the possibility of a systematic theory of meaning for natural language against these influential tendencies

Cross-linguistic Semantics of Tense, Aspect, and Modality Lotte Hogeweg, Helen de Hoop, Andrej Malchukov, 2009-11-30 In recent years we have witnessed on the one hand an increased interest in cross linguistic data in formal semantic studies and on the other hand an increased concern for semantic issues in language typology However only few studies combine semantic and typological research for a particular semantic domain such as the papers in Bach et al 1995 on quantification and Smith 1997 on aspect This book brings together formal semanticists with a cross linguistic perspective and or those working on lesser known languages and typologists interested in semantic theory to discuss semantic variation in the specific domain of Tense Aspect and Mood Modality [The Semantics of Knowledge Attributions](#) Michael Blome-Tillmann, 2022 This book offers a critical overview of the current debate on the semantics of knowledge attributions It examines the main principles underlying the various approaches to the topic and outlines how they aim to explain the pertinent data and resolve philosophical puzzles and challenges *International Encyclopedia of Linguistics*

Stainton, Christopher Viger, 2008-11-14 Are natural languages genuinely compositional What roles does context play in linguistic communication and by what means In particular does context interfere with the compositional determination of truth conditions What meanings should theorists assign to sentences if compositionality is to be retained These are the central questions of this important volume of new philosophical essays in honour of Ernie Lepore

Names and Context Dolf Rami, 2021-11-04 Dolf Rami contributes to contemporary debates about the meaning and reference of proper names by providing an overview of the main challenges and developing a new contextualist account of names Questions about the use and semantic features of proper names are at the centre of philosophy of language How does a single proper name refer to the same thing in different contexts of use What makes a thing a bearer of a proper name What is their meaning Guided by these questions Rami discusses Saul Kripke's main contributions to the debate and introduces two new ways to capture the rigidity of names proposing a pluralist version of the

causal chain picture Covering popular contextualist accounts of names both indexical and variabilist he presents a use sensitive alternative based on a semantic comparison between names pronouns and demonstratives Extending and applying his approach to a wide variety of uses including names in fiction this is a comprehensive explanation of why we should interpret proper names as use sensitive expressions
