Semantics Of Coordination:

The Semantics of Coordination Ewald Lang,1984-01-01 This study is an attempt to explain coordinate conjoining as a rule governed process of establishing specific semantic relations within and between sentences Coordination is thus conceived of both as a basic device of linguistic complex formation and as a rather fundamental principle underlying the creation of the text From the point of view of achieving coherence coordinate conjoining is described in this monograph as an integrative process Described are the conditions governing this process the rules according to which take place in short the complex interaction of various linguistically identifiable features displayed by coordinate structures Coordinate conjoining is regarded here as the result of the interplay of three factors which belong to distinct levels of semantic description the meaning of the conjuncts the relation between the meaning of the conjuncts and the meaning of the connectors The step by step explication of the interaction of these levels in determining the semantic interpretation of coordinate structures forms the core of the present study

the interplay of three factors which belong to distinct levels of semantic description the meaning of the conjuncts the relation between the meaning of the conjuncts and the meaning of the connectors COPAC **One-to-many-relations in morphology, syntax, and semantics** Berthold Crysmann,Manfred Sailer,2021 The standard view of the form meaning interfaces as embraced by the great majority of contemporary grammatical frameworks consists in the assumption that meaning can be associated with grammatical form in a one to one correspondence Under this view composition is quite straightforward involving concatenation of form paired with functional application in meaning In this book we discuss linguistic phenomena across several grammatical sub modules morphology syntax semantics that apparently pose a problem to the standard view mapping out the potential for deviation from the ideal of one to one correspondences and develop formal accounts of the range of phenomena We argue that a constraint based perspective is particularly apt to accommodate deviations from one to many correspondences as it allows us to impose constraints on full structures such as a complete word or the interpretation of a full sentence instead of deriving such structures step by step Most of the papers in this volume are formulated in a particular constraint based grammar framework Head driven Phrase Structure Grammar The contributions investigate how the lexical and constructional aspects of this theory can be combined to provide an answer to this question across different linguistic sub theories *GeoSpatial Semantics* M. Andrea Rodriguez,2005-11-16 This book constitutes the refereed proceedings of the First International Conference on GeoSpatial Semantics GeoS 2005 held in Mexico City Mexico in November 2005 The 15 revised full papers presented together with 4 short papers were carefully reviewed and selected from 42 submissions The papers are organized in topical sections on theories for the semantics of geospatial information formal representations for geospatial data similarity comparison of spatial data sets ontology based spatial information retrieval and geospatial semantic Web **The Semantics of Dynamic Space in French** Michel Aurnague,Dejan Stosic,2019-07-29 Research on the semantics of spatial markers in French is known mainly through Vandeloise s 1986 1991 work on static prepositions However interest in the expression of space in French goes back to the mid 1970s and focused first on verbs denoting changes in space whose syntactic properties were related to specific semantic distinctions such as the opposition between movement and displacement This volume provides an overview of recent studies on the semantics of dynamic space in French and addresses important questions about motion expression among which goal bias and asymmetry of motion the status of locative PPs the expression of manner fictive or non actual motion Descriptive experimental and formal or computational analyses are presented providing complementary perspectives on the main issue The volume is intended for researchers and advanced students wishing to learn about both spatial semantics in French and recent debates on the representation of motion events in language and cognition **Advances in the study of Siouan languages and linguistics** Catherine Rudin, Bryan James Gordon,2016-05-18 The Siouan family comprises some twenty languages historically spoken across a broad swath of the central North American plains and woodlands as well as in parts of the

southeastern United States In spite of its geographical extent and diversity and the size and importance of several Siouan speaking tribes this family has received relatively little attention in the linguistic literature and many of the individual Siouan languages are severely understudied This volume aims to make work on Siouan languages more broadly available and to encourage deeper investigation of the myriad typological theoretical descriptive and pedagogical issues they raise The 17 chapters in this volume present a broad range of current Siouan research focusing on various Siouan languages from a variety of linguistic perspectives historical genetic philological applied descriptive formal generative and comparative typological The editors preface summarizes characteristic features of the Siouan family including head final and verb centered syntax a complex system of verbal affixes including applicatives and subject possessives head internal relative clauses gendered speech markers stop systems including ejectives and a preference for certain prosodic and phonotactic patterns The volume is dedicated to the memory of Professor Robert L Rankin a towering figure in Siouan linguistics throughout his long career who passed away in February of 2014 **The Oxford Reference Guide to Lexical Functional Grammar** Mary Dalrymple,John J. Lowe,Louise Mycock,2019 The authors provide detailed and extensive coverage of the analysis of syntax semantics morphology prosody and information structure and how these aspects of linguistic structure interact in the nontransformational framework of LFG The volume will be a reference for graduate and advanced undergraduate students and researchers in a wide range of linguistic sub fields including syntax morphology semantics information structure and prosody as well as those working in language documentation and description Verlag 􀀀􀀀􀀀􀀀 ,2008 **The Semantic Web: Research and Applications** Christoph Bussler,2004-04-28 This book constitutes the refereed proceedings of the First European Semantic Web Symposium ESWS 2004 held in Heraklion Crete Greece in May 2004 The 33 revised full papers presented were carefully reviewed and selected from 79 submissions The papers are organized in topical sections on ontology engineering ontology matching and mapping ontology based querying ontology merging and population infrastructure semantic web services service discovery and composition data from the semantic web knowledge presentation applications content management and information management and integration **Robotic Systems: Concepts, Methodologies, Tools, and Applications** Management Association, Information Resources,2020-01-03 Through expanded intelligence the use of robotics has fundamentally transformed a variety of fields including manufacturing aerospace medicine social services and agriculture Continued research on robotic design is critical to solving various dynamic obstacles individuals enterprises and humanity at large face on a daily basis Robotic Systems Concepts Methodologies Tools and Applications is a vital reference source that delves into the current issues methodologies and trends relating to advanced robotic technology in the modern world Highlighting a range of topics such as mechatronics cybernetics and human computer interaction this multi volume book is ideally designed for robotics engineers mechanical engineers robotics technicians operators software engineers designers programmers industry professionals researchers
