## **Should I Medicate My Child Sane Soluti:**

**Should I Medicate My Child?** Lawrence Diller, 2003-04-17 When Running on Ritalin was published in 1998 it touched off a firestorm about treating children with psychiatric drugs Dr Lawrence Diller established himself as the leading expert on the controversial use of stimulants for attention deficit disorder Since then parents physicians teachers and psychologists have clamored for his expertise on psychological problems beyond ADD and on drugs beyond Ritalin More and more parents are asking the simple question Should I medicate my child The answer is not as simple as some experts say Children who are angry intense distractible over energetic obsessive shy listless or remote rarely benefit from an either or strategy Unlike those with a strong pro or anti drug agenda Dr Diller advocates a balanced approach he shows how a wise pediatrician one who prescribes drugs but also urges non pharmaceutical interventions when possible makes decisions Should I Medicate My Child empowers parents to ask the same questions Dr Diller poses in diagnosis and treatment Have all non drug approaches been tried Is the diagnosis accurate What s known or unknown about the recommended drug Calmly comforting authoritative and illustrated with real life examples Should I Medicate My Child is essential reading for parents who have been told their preschooler should be tested for a disorder whose fifth grader has been prescribed Prozac or Depakote or whose teenager has been diagnosed with a chemical imbalance Should I Medicate My Child features a detailed easy to access Appendix of Frequently Prescribed Drugs what they do side effects dosages and more Should I Medicate My Child answers parents vital questions Is it fair to discipline my hyperactive child if he can t help himself when he misbehaves Choosing the right kind of discipline is essential Often the time honored time out is not the best choice The psychiatrist says the medication he s prescribing is safe How can I know if that s true Dr Diller s detailed Appendix includes little known information on how or if a drug has actually been tested on children Does it make good sense to use medication right away Dr Diller explains why this can sometimes be the best course of action My pediatrician says there are drugs that will help my shy six year old be more outgoing Is this true Prescribing drugs for withdrawn children is a risky business Dr Diller explains why and offers alternatives to help ease their distress

**Kids Caught in the Psychiatric Maelstrom** Elizabeth E. Root MSW, MS Ed, 2009-09-23 This book offers a warning that American children are receiving increased chemical treatment from psychiatrists and provides a primer on how to improve the emotional health of kids without drugs Maelstrom is an apt metaphor for the inexorable deterioration many children experience inside the mental health system Kids Caught in the Psychiatric Maelstrom How Pathological Labels and Therapeutic Drugs Hurt Children and Families challenges current treatment practices and addresses the critically important issue of excessive prescribing of psychiatric medications to children This encyclopedic work reveals inside the system information emphasizing the theoretical divide at the root of the controversy over diagnosis and treatment It explains how the 1990s decade of the brain replaced talk therapy with biochemical treatments leading to the hegemony of the pharmaceutical industry and subsequently the massive drugging of

children Author Elizabeth E Root details common diagnoses and treatments explaining up to date brain research with some surprising interpretations and noting dangerous national precedents to mental screening Finally she illuminates pathways toward solutions and healthier families sharing nonpsychiatric explanations for the nation's increase of troubled children and the rationale and research supporting non drug alternative approaches to childhood distress *No Child Left Different* Sharna Olfman, 2006-01-30 A stellar group of authors from across disciplines explains the alarming increase in the use of psychotropic medications questions the causes and presents disturbing thoughts regarding this phenomenon and the risks it creates for children They take an in depth look at the conditions that have led to drugging our children and stress how emotional social cultural and physical environments can both damage and heal young minds And they challenge the model that maintains that psychological disturbance is genetic and thus requires medication This is riveting reading for all who care about the youngest members of society Over the past 15 years there has been a 300 percent increase in the use of psychotropic medications with girls and boys under the age of 20 and prescriptions for preschoolers have skyrocketed A stellar group of authors from across disciplines explains this increase questions the causes and presents disturbing thoughts regarding this phenomenon as they describe the risks it creates for children While there are certainly extreme cases where drugs are the only option medication rather than psychotherapy and counseling has become the first choice for treatment rather than a last resort The experts who joined forces for this book take an in depth look at the conditions that have led to drugging our children and stress how emotional social cultural and physical environments can both damage and heal young minds The so called medical model one maintaining that psychological disturbance is genetic and thus requires medication is challenged in this volume Contributors range from a pediatrician who has testified before Congress and been featured in a Time magazine cover story to a top child psychiatrist who is an official for the American Academy of Child and Adolescent Psychiatry along with a well known child psychiatrist psychologists environmentalists and a public policy consultant This is riveting reading for all who care about the youngest members of society Among other issues this work looks at controversy over whether psychiatric medications are safe or effective for children and what little we know about their effect on still developing brains as well as the role of corporate interests in the increased use of psychotropics for children Chapters address the role of environment in both causing and curing disorders more and more often diagnosed in our youngsters from ADHD depression and anxiety to eating disorders The core questions addressed by this sage group of contributors are these Why are so many children being diagnosed with psychiatric disturbances and given drugs Why have drugs become the first treatment of choice to deal with those disorders *Bipolar Children* Sharna Olfman, 2007-10-30 Over the last decade the number of children diagnosed with bipolar disorder has increased up to fortyfold This is a trend exclusive to the United States and one that alarmingly leads to most of the diagnosed children some still in their infancy being prescribed antipsychotic drugs often in combination with anticonvulsants These classes of drugs have dangerous side effects including a

doubling of mortality rates shortened life span extreme weight gain and Type II diabetes In this book psychologist Sharna Olfman leads a team of widely known experts who examine that astonishing rise in the diagnosis of pediatric bipolar disorder particularly in the absence of any compelling evidence for either the validity of the criteria being used to diagnose it or the safety and effectiveness of the drugs being used to treat it When a child is unnecessarily prescribed antipsychotic and anticonvulsant drugs his or her mental and physical health may be irrecoverably compromised says Olfman With as many as two and a half million children from across the socioeconomic spectrum now taking antipsychotics we have set the stage for widescale child abuse The contributors to this revealing and disturbing volume include psychiatrist David Healy one of the world's leading authorities on psychotropic drugs pediatrician Philip Landrigan an internationally renowned health researcher and Robert Whitaker an award winning medical journalist The contributors identify and explain complex and interrelated factors that have set the stage for the pediatric bipolar epidemic and they recommend practice and policy changes to stem the tide of misdiagnosis and dangerous drug prescriptions
