materials from archival and digital repositories throughout the world It adopts a capsule approach that focuses on short selections of significant primary source content instead of redundant and irrelevant materials found in online data collections The current collection draws attention to railway cultures through railroad reports parliamentary papers government documents police reports public health records engineering reports technical papers medical surveys memoirs diaries travel narratives ethnographies newspaper articles editorials pamphlets broadsides paintings cartoons engravings photographs art ephemera and passages from novels and poetry collections that shed light on the cultural history of railways The editor's original essays and headnotes on the cultural politics of railways introduce over 200 carefully selected primary sources Students and researchers come to understand railways not as applied technological impositions of industrial capitalism but powerful fluid and idiosyncratic historical constructs

The History of Human Populations P. M. G. Harris, 2001-07-30 From classic demographic theory to the best contemporary thinking this book will fruitfully replace previous ways of looking at population expansion and contraction The 50 years of scholarship that covers 2 1/2 millennia peoples in all parts of the world and aggregates from hamlets to the global level this volume shows that populations grow or decline according to six related patterns Looking at the path taken by unrestricted population growth the effects of limited resources demographic disaster population explosion and the implications of stable population theory and demographic transition for numerical trends Harris reinterprets and insightfully interconnects all of these via six related growth curves opening the way for a better understanding of how populations expand through changes in births deaths and migrations and how they interact with their economic social and physical environments All six trend types the book shows are shaped by forces internal to the dynamics of populations themselves Most frequently they increase in a constantly proportionally slowing curve as a specific stimulus is spent through expansion With shocks like war or epidemics they contract according to an upside down version of this curve The only two curves until recent times these are still the most common in local populations With modern economic and social change some populations

mostly larger ones follow one of four newer growth patterns either increasing at a steady rate growing in a gradually slowing pattern between this constancy and the rapidly decelerating basic growth curve exploding in an accelerating fashion or in a few ominous cases decreasing in an accelerating decline Where these curves occur depends on the distinctive ways populations interact with economic changes Harris s findings have profound implications for understanding economic and social change These implications will be discussed in the following volume
