Ten Fantasy Lectures on the Sun, Moon, and Stars John Gurley, 2011-11-04 *The Evolution of Earth's Climate* J. O. Robertson, G. V. Chilingar, O. G. Sorokhtin, N. O. Sorokhtin, W. Long, 2018-06-12 Written by a group of the most experienced and well known environmental engineers in the world from a unique perspective this volume explores the hot button issue of climate change its causes and the future of the planet Climate change is one of the most controversial and argued issues in the world today and it has been for years It has been politicized by politicians on all sides some scientists have used the study of it for their own material gain above true scientific discovery and some scientific theories surrounding it have been believed even though proven false But there is not by any means complete agreement among all scientists throughout the world on this issue Written by two of the world's most well respected environmental and petroleum engineers this book is meant to be one voice in the scientific literature on this important subject Other books also available from Wiley Scrivener take the opposite stance but it is important in our scientific journey to listen to all voices and rely on facts rather than opinions We trust the reader to make his or her decisions based on all of the facts and not just some of them **Posidonius**

Rogers,2011-04-17 In our scientific age an understanding of physics is part of a liberal education Lawyers bankers governors business heads administrators all wise educated people need a lasting understanding of physics so that they can enjoy those contacts with science and scientists that are part of our civilization both materially and intellectually They need knowledge and understanding instead of the feelings all too common that physics is dark and mysterious and that physicists are a strange people with incomprehensible interests Such a sense of understanding science and scientists can be gained neither from sermons on the beauty of science nor from the rigorous courses that colleges have offered for generations when the headache clears away it leaves little but a confused sense of mystery Nor is the need met by survey courses that offer a smorgasbord of tidbit they give science a bad name as a compendium of information or formulas The non scientist needs a course of study that enables him to learn real

science and make its own with delight For lasting benefits the intelligent non scientist needs a course of study that enables him to learn genuine science carefully and then encourages him to think about it and use it He needs a carefully selected framework of topics not so many that learning becomes superficial and hurried not so few that he misses the connected nature of scientific work and thinking He must see how scientific knowledge is built up by building some scientific knowledge of his own by reading and discussing and if possible by doing experiments himself He must think his own way through some scientific arguments He must form his own opinion with guidance concerning the parts played by experiment and theory and he must be shown how to develop a taste for good theory He must see several varieties of scientific method at work And above all he must think about science for himself and enjoy that These are the things that this book encourages readers to gain by their own study and thinking
