*Real-Time Massive Model Rendering* Sung-eui Yoon, Enrico Gobbetti, David Kasik, Dinesh Manocha, 2008-08-08 Interactive display and visualization of large geometric and textured models is becoming a fundamental capability There are numerous application areas including games movies CAD virtual prototyping and scientific visualization One of observations about geometric models used in interactive applications is that their model complexity continues to increase because of fundamental advances in 3D modeling simulation and data capture technologies As computing power increases users take advantage of the algorithmic advances and generate even more complex models and data sets Therefore there are many cases where we are required to visualize massive models that consist of hundreds of millions of triangles and even billions of triangles However interactive visualization and handling of such massive models still remains a challenge in computer graphics and visualization In this monograph we discuss various techniques that enable interactive visualization of massive models These techniques include visibility computation simplification levels of detail and cache coherent data management We believe that the combinations of these techniques can make it possible to interactively visualize massive models in commodity hardware

**A Field Guide to Genetic Programming**, 2008 Genetic programming GP is a systematic domain independent method for getting computers to solve problems automatically starting from a high level statement of what needs to be done Using ideas from natural evolution GP starts from an ooze of random computer programs and progressively refines them through

processes of mutation and sexual recombination until high fitness solutions emerge All this without the user having to know or specify the form or structure of solutions in advance GP has generated a plethora of human competitive results and applications including novel scientific discoveries and patentable inventions This unique overview of this exciting technique is written by three of the most active scientists in GP See [www.gpfieldguide.org.uk](http://www.gpfieldguide.org.uk) for more information on the book
