Reviews in Veterinary Neurology and Neurosurgery Andrea Tipold,John Henry Rossmeisl,2025-04-07 In recent years research in the field of veterinary neurology and neurosurgery has experienced exponential growth although the resultant expansion of knowledge has not been equally parsed across the various sub disciplines comprising our specialty nor focused on some of the most critical issues facing our profession today For example studies of neurological diseases affecting dogs and cats substantially outnumber those concerning farm wildlife and exotic animal species There also remains many timely and important unanswered questions related to how climate induced changes in ecosystems may directly or indirectly alter the incidence distribution or risks factors of infectious nutritional or toxicologic diseases affecting the nervous system of animals or best practices that promote environmental sustainability within veterinary clinical neurology In addition while new and potentially transformative technologies such as generative artificial intelligence have gained worldwide attention and been implemented resulting in improvements in several aspects of human neurological practice there have been very few specific investigations delving into the utility and validity of these tools in veterinary neurology
