Functional magnetic resonance imaging (fMRI) is a non-invasive technique that can be used to examine neural responses with and without the use of a functional task. Indeed, fMRI has been used in clinical trials and pharmacological research studies. In mental health, it has been used to identify brain areas linked to specific symptoms but also has the potential to help identify possible treatment targets. Despite fMRI's many advantages, such findings are rarely the primary outcome measure in clinical trials or research studies. This article reviews fMRI studies in depression that sought to assess the efficacy and mechanism of action of compounds with antidepressant effects. Our search results focused on selective serotonin reuptake inhibitors (SSRIs), the most commonly prescribed treatments for depression and ketamine, a fast-acting antidepressant treatment. Normalization of amygdala hyperactivity in response to negative emotional stimuli was found to underlie successful treatment response to SSRIs as well as ketamine, indicating a potential common pathway for both conventional and fast-acting antidepressants. Ketamine's rapid antidepressant effects make it a particularly useful compound for studying depression with fMRI; its effects on brain activity and connectivity trended toward normalizing the increases and decreases in brain activity and connectivity associated with depression. These findings highlight the considerable promise of fMRI as a tool for identifying treatment targets in depression. However, additional studies with improved methodology and study design are needed before fMRI findings can be translated into meaningful clinical trial outcomes.

1. Introduction

Functional magnetic resonance imaging (fMRI) is a commonly-used, non-invasive technique used to study the living human brain. fMRI refers to the acquisition of data modulated with extrinsic (e.g., task stimulus) stimuli or allowed to follow intrinsic fluctuations (e.g., thought). It is typically conducted using blood oxygen level dependent (BOLD) sensitivity methods—such as resting-state and task-based fMRI.

Magnetic Resonance in Experimental and Clinical Oncology Jeffrey L. Evelhoch, William Negendank, Frederick A. Valeriote, Laurence H. Baker, 2012-12-06 Over the past decade techniques have been developed and implemented to observe metabolism noninvasively in localized regions of intact living experimental animals and humans through the use of magnetic resonance spectroscopy MRS At the same time magnetic resonance imaging MRI techniques developed in the 1970s and refined in this decade have been increasingly applied as a powerful clinical tool to probe human anatomy Because of the unusual metabolic and physiologic characteristics of malignant tissues oncology has been one of the primary focuses of the application of both MRS and MRI Although considerable progress has been made in oncologic applications of magnetic resonance MR further research is needed to realize the full potential of MR in this area Consequently the 21st Annual Detroit Cancer Symposium entitled Magnetic Resonance in Experimental and Clinical Oncology was organized to provide a forum for researchers in the field to report the state of the art of MRS and MRI in oncology to discuss future goals for MRS and MRI in oncology and to define the research needed to meet those goals The major emphasis of the symposium was on MRS due to both the recent widespread availability of clinical MRS instrumentation and the extensive amount of animal MRS research performed over the past half decade

Chemopotential by Hyperthermia M. Urano, E. Douple, 1994-04 The number of studies on the use of hyperthermia in combination with chemotherapeutic agents is steadily increasing However

thermochemotherapy has not yet captured significant clinical interest Therefore this fourth volume in the book series Hyperthermia and Oncology deals with this topic as the editors feel there is a significant potential for this combined modality as an adjuvant to palliative or definitive radiotherapy or the use of chemotherapy alone to treat localized or advanced diseases The articles in this volume deal with various aspects of chemotherapy combined with hyperthermia and will be of value and interest to researchers in this field *Congress Proceedings* William C. Dewey, Martha Edington, Michael Fry, 2013-10-02 Congress Proceedings **Journal of the National Cancer Institute**, 2006-05 Each issue is packed with extensive news about important cancer related science policy politics and people Plus there are editorials and reviews by experts in the field book reviews and commentary on timely topics Eicosanoids and Other Bioactive Lipids in Cancer and Radiation Injury Kenneth V. Honn, Lawrence J. Marnett, Santosh Nigam, Thomas Walden Jr., 2012-12-06 This volume contains the proceedings of the First International Conference on Eicosanoids and Other Bioactive Lipids in Cancer and Radiation Injury held in Detroit Michigan on October 11 14 1989 The program consisted of 83 oral and 29 poster presentations 74 of which are included in these proceedings The major sponsors of the conference were the Armed Forces Radiobiology Research Institute located in Bethesda Maryland the Radiation Oncology Research and Development Center of the Gershenson Radiation Oncology Center Harper Hospital in Detroit Michigan and Schering AG of West Germany Eighteen other organizations provided additional support The conference was unique in its attempt to link the eicosanoid and lipid researchers in the radiobiology and cancer disciplines The diverse roles that eicosanoids and other bioactive lipids play in these biological phenomena including the participation of lipid oxidation in conversion of procarcinogens positive and negative modulation of tumor growth immunomodulation tissue injury and yet protection and enhancement of cancer therapy necessitated scientific interaction to sort out and understand these complex and sometimes contradictory observations The success of this effort is reflected not only through these proceedings but also through the decision to continue the conference series with a second meeting to be held in Berlin between September 17 21 1991 **Cytotoxic Anticancer Drugs: Models and Concepts for Drug Discovery and Development** Frederick A. Valeriote, Thomas H. Corbett, Laurence H. Baker, 2012-12-06 The focus of the 22nd Annual Detroit Cancer Symposium was the presentation and discussion of cytotoxic agents with a significant portion of the symposium including the exciting frontiers of drug discovery being explored by the National Cooperative Drug Discovery Groups NCDDG Program The symposium brought together a large number of investigators from government universities and pharmaceutical companies involved in the discovery and development of new anticancer agents Exciting new leads were presented and the status of others presently under development was discussed Of particular significance has been the initiation of renewed efforts in the area of natural product drug discovery where the discovery of new cytotoxics is very promising at the moment A number of major changes have occurred during the last decade in research on drug discovery of cytotoxic agents Critical reviews of a number of the models and concepts underlying

drug discovery represented a continuous thread throughout the meeting being constantly discussed in terms of their advantages disadvantages and capabilities of discovering solid tumor active anticancer agents A recent development which is to be much applauded and which portends to great discoveries is the new relationship formed between Government University of Industry The NCDDG mechanism which stimulates this interaction is an inexpensive manner to greatly magnify the drug discovery and development effort nationally Cytotoxic Anticancer Drugs Models and Concepts for Drug Discovery and Development represents a forum which will become the major mode for bringing together these three different components in the equation to regularly discuss new results and ideas *Anticancer Research* ,1996 **Current Catalog** National Library of Medicine (U.S.),1993 First multi year cumulation covers six years 1965 70 Cancer Imaging M.
